

1.3 Precursors 1/ in bulk 2/

| Scientific chemical name/ <u>3/</u><br>Structural formula <u>4/</u>                          | Quantity<br>(metric tons) | Number and size<br>of containers |
|--|---------------------------|----------------------------------|
| <u>Precursors for unitary systems</u><br><br><u>Components for multicomponent systems 5/</u> |                           |                                  |

| Scientific chemical name/ <u>3/</u><br>Structural formula <u>4/</u> | Quantity<br>(metric tons) | Number and size of containers | Number and size of containers |
|---|---------------------------|-------------------------------|-------------------------------|
|   |                           |                               |                               |

1/ Identified in accordance with approaches to be worked out in the context of Article II.

2/ Some delegations did not consider this table necessary.

3/ In accordance with the IUPAC (International Union of Pure and Applied Chemistry) Nomenclature.

4/ Different views exist whether it is necessary to state both the scientific chemical name and the structural formula in order for the declarations to be unambiguous.

5/ Some delegations suggested that multicomponent chemical weapons should not be declared as a special category in a separate table.
