" " 16.....1-16 " full.
---	---

Compare your circular and gang saws with the above gauge, and estimate the amount you would save each season. By cutting your stock with 14-15 or 16 gauge Band Saw—either gauge thoroughly practical. The Band will cut 1-8th—say 7-64. Your circular, if 6 gauge, will probably cut 21-64. The saving is enormous. You cannot afford to continue the waste.

**Don't hesitate to put in a Band.**

Improved Band Mills, Saws improved in steel, temper and manufacture, improved tools reducing the amount of skilled labor required to keep saws in order, all combine to make the running of a Band an easy matter to what it was a few years ago.
