

# JUNE.

The first part of this month will be temperately warm, with occasional showers. On the 8th the weather will become more changeable, alternately warm and cold, with chilly rains,—on the 12th it will become more steady, and warm weather will recommence. On the 16th the heat will be excessive, but will not last. Changeable weather will again set in, sometimes warm and sometimes chilly and disagreeable with occasional rain. On the 25th a tempest of wind and rain, with thunder squalls, will occur, after which the weather will become steadily fair and warm to the end of the month.

"A good education is a young man's best capital," was truly and beautifully said by Miss Sedgwick.
