

Coffee
Chaff

Compare
Them

Standard

Open a tin of Gold Standard Java and Mocha and compare it with any coffee that you may be using.

You will detect a difference at once, both in aroma and appearance. But, examine both coffees closely—notice that Gold Standard is all the pure brown particles of the coffee berry, while the ordinary coffee is full of dust and light colored flakes of "chaff."

This "chaff" is the injurious substance in ordinary coffee, as it contains a large per cent. of tannic acid, which not only impairs the flavor but causes indigestion and other ill effects. Medical authorities agree that coffee, when free from this tannic acid or "chaff," is a pure, wholesome beverage and very beneficial to health.

That's why many of them recommend our Gold Standard Coffee. It is all the pure brown meat of the coffee berry, with every particle of "chaff" and coffee dust removed by our special process.

You get the benefit—in the improved flavor as well as wholesomeness. Every trace of bitterness is eliminated by this process, so that you get only the rich, natural flavor of the coffee, delicious to taste and wholesome to drink.

WE WILL SEND YOU A COOK BOOK

If your grocer does not have Gold Standard "The Chaffless" Coffee send us his name and address and we will send you our 80 page Cook Book Free.
