VANSTONE & ROGERS

Importers and
Breeder's of

Clydesdales, Percherons
and Hackneys

We have landed three importations of Clydesdale and Percheron stallions in 1910, and think they are the best we have ever owned. Write or come and see them.

We are importing a large number of Clydesdale, Percheron and Belgian mares in July, and will endeavor to get young mares of quality and size in foal to some of the world's most famous sires.

If this interests you, write now, and tell us what you want.

Our prices lowest; terms most liberal, and guarantee genuine.

JAS. BROOKS, Manager.

taste. "There is, however, one drawback with eggs preserve in a solution of water glass, viz., that the shell easily bursts in boiling water. This may be avoided by cautiously piercing the shell with a strong needle."

The following directions for preserving by this method are given:

Use pure water that has been thoroughly boiled and then cooled. To each 10 quarts of water add 1 quart of water glass. Pack the eggs in a jar and pour solution over them, covering well.

Keep the eggs in a cool dark place. A dry cool, cellar is a good place.

If the eggs are kept in too warm a place the silicate is deposited and the eggs are not properly protected. Do not wash the eggs before packing, for by so doing you injure their keeping quality, probably by dissolving the mucilaginous coating on the outside of the shell.

For packing, use only perfectly fresh eggs, for stale eggs will not be saved and may prove harmful to the others.

Water glass is a very cheap product, that can usually be produced at not to exceed 50 cents per gallon, and 1 gallon would make enough solution to preserve 50 dozen eggs, so that the cost of material for this method would only be about 1 cent per dozen. Water glass is sodium and potassium silicate, sodium silicate being usually the cheaper. If wooden kegs or barrels are to be used in which to pack the eggs, they should first be thoroughly scalded with boiling water, to sweeten and purify them.—U. S. Farmers' Bulletin, No. 103.

THE PARENTS OF OUR LAYERS

Not enough attention is paid to the parents of the fowls that are bred to the farm. As a result we every year get some weak birds which fall a prey to disease. The eggs for hatching are selected from the number dropped at about the time they are wanted for setting, and there is generally not the slightest idea of what hens laid the eggs that are used in the incubation.

The farmer will save a large mortality among his young chicks by making sure that his eggs used for incubation are from fowls that are more than usually healthy and vigorous. The fowls that have been subject to disease should not be permitted to produce offspring, and the only way to do this is to know what birds are the layers of the eggs used. This time of the year is a good one in which to pick out of the flock of young birds the most vigorous ones. There will be some that will show every indication of being more vigorous than their fellows and these should be marked in some way, preferably by the use of leg bands. This will prevent them from being sold in the late fall when the flock is being thinned out. A vigorous fowl will often mature much more quickly than a fowl that is not very vigorous, yet by late fall the less vigorous fowls may have attained about the same size as the others and be thus hard to distinguish from the others as to difference in vigor.

When the time comes for fattening the fowls for market, the breeding birds, birds, or those intended for laying eggs for the use of the incubator or setting hens, should be kept apart from the others. It would be easier to let them run and confine the fowls that are to be fattened for the market. The objection to keeping the flock together at such a time is that the birds intended for laying eggs to be used for incubation receive too much fattening food. This is not only a waste of the fattening food, but, if the fat becomes heavy on the breeding birds it becomes a detriment to their performance as layers.

The greatest object in this selection at this time is to get rid of all birds that have a tendency to weakness or to disease. A writer on the health of fowls says that fortunately most of the eggs of diseased birds prove to be infertile, or we would have more fowls of this kind than we now have. Conversely, if vigorous, healthy birds are selected to be the future layers of setting eggs the percentage of fertility will be raised.

Doubtless many of the eggs of weak fowls are sufficiently fertilized to permit of the chicks getting out of the shell, but nothing more. The loss from the use of infertile eggs is large, and this loss can be reduced by the

Troubled With Backache For Years.

Now Completely Cured
By The Use Of

DOAN'S KIDNEY PILLS.

Mrs. W. C. Doerr, 13 Brighton St., London, Ont., writes:—"It is with pleasure that I thank you for the good your Doan's Kidney Pills have done me. Have been troubled with backache for years. Nothing helped me until a friend brought me a box of your Kidney Pills. I began to take them and took four boxes, and am glad to say that I am cured entirely and can do all my own work and feel as good as I used to before taken sick. I am positive Doan's Kidney Pills are all you claim them to be, and I advise all kidney sufferers to give them a fair trial."

Let Doan's Kidney Pills do for you what they have done for thousands of others. They cure all forms of kidney trouble and they cure to stay cured.

Price, 50 cents per box or 3 boxes for \$1.25 at all dealers or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

When ordering specify "Doan's."

Cure the lameness and remove the bunch without scarring the horse—have the part looking just as it did before the blemish came.

Fleming's Spavin Cure (Liquid) is a special remedy for soft and semi-solid blemishes—Boog Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It is neither a liniment nor a simple blister, but a remedy unlike any other—doesn't irritate and can't be limited. Easy to use, only a little required, and your money back if it ever fails.

Fleming's Vest-Pocket Veterinary Adviser describes and illustrates all kinds of blemishes and gives you the information you ought to have before ordering or buying any kind of a remedy. Mailed free if you write.
