Pie Making

A Word on Tree Planting.

A Word on Tree Planting.
To the Bhitter of the Haucen Signal.
Sm.—All are agreed that our form and the continual data to the start a continual data to the start and the contained them as being and the start the start and the contained them as being and the start data the start the st in the row two or three feet, or closer for at inst; that is, if made er filed will cedar, hedges. Pines do with drier soil, fruit, as simply warming a little makes twelve feet I have known them do well at; but should rather plant them closer, and thin out where desired. Any toler-heating up, pour a little hot water over heating up, pour a little hot water over baking pies, they should always be placed on the hottest lower grate at the test as the insures of the set of the set of the set of the port soil, but not so well.

baking pies, they should always be placed on the hottest lower grate at first, as this insures a good brown under crust. --[Rural New-Yorker.

Binding Twine. What is it ?

the bush, select young trees, and with a sharp apade, cut a circle about the.n, any eight inches from the stem, if little, but eight inches from the stem, if little, but a top root, cut it a foot deep, and leave it till falls by that time summer growth will have started roots inside the circle, and the young tree properly litted with a spade, will come up a mass of earth and roots which will cling together, and generally without fail. In the meantime mark the tree to know it, and to know its

roots which will cling together, and generally without fail. In the meantime mark the tree to know it, and to know its south side. Then in the fall if you take all the earth you can, plant at once after digging and fill up with soft earth, not hard chunks, and mulch afterwards. Most trees will grow if mice and eattle can be kept away. This I have known excellest with maples, but they will transplant without it. If the transplanting, owing to their having few roots, be tried with this usthod, much greater success may be expected than without. Could we see this fall a good many plantations of some acrease set out with care, say four fest apart, it wend soon

Could we see this tast a good limit plantations of some acres set out with care, say four feet apart, it would soon that incoment. Good of mauilla and Sissi, equal parts.

care, say four feet apart, it would soon be found an excellent investment. Good dimber of all sort is growing scarce and dear, and in ten years he who plants successfully new will be fortunate. True —it will not be fit to cut then, but will sell for a good figure to those who are prepared to wait till it is fit. And—one word more—many good pieces of forest which will otherwise dry pu die and how down, could be saved. Musas of the same family to which the banana belongs, which it much reac mbles. It grows readily from seed, and also from suckers, and when cut down, like all the banana class, it readily sprouts from the same root; and as it matures in any the same root; and as it matures in any the same root; and as it matures in any up, die, and blow down, could be saved, yielding beautiful successions of trees, a perpetual store-house of timler, could we but afford to keep cattle out of them. Yours dec., M. W. PHIPPS. from the same root; and as it matures in three years, and can be grown in any tropical country, we are not likely to be ever troubled for the raw material. It often grows to a height of 15 to 26 feet, having a tuft of leaves only at the top. When properly matured, it is cut at the root, and the leaves are peeled off down to the very bottom of the stalk; these stripe are then beaten on smooth wooden blocks with clubs or mallets until the
