PHARMACOLOGY.

Clinical and Experimental, A Ground-work of Medical Treatment, being a Text Book for Students and Physicians. By Dr. Hans H. Meyer, of Vienna, and Dr. Gottlieb, of Heidelberg, Professors of Pharmacology. Authorized translation into English by John Taylor Halsey, M.D., Professor of Pharmacology, Therapeutics and Clinical Medicine, Tulane University. With 65 text illustrations, and 7 in colors. Philadelphia and London: J. B. Lippincott Company. Price, \$6.00.

If one wishes to secure a thorough knowledge of the action of drugs, he should turn to the pages of this volume. In the clearest possible manner the authors set forth the action of drugs on the various organs of the human body. From this foundation the steps are taken along scientific routes for the treatment of disease. All through it is a most satisfactory work to read, as there is not a weak page in it. When one has to prescribe drugs in the treatment of disease it is a great satisfaction to have a clear conception of what their probable effects will be. This is just what this book sets out in the ablest manner. There is a very complete bibliography to each section. The authors discuss the action of the various drugs under the various anatomical systems, as the eye, circulation, digestion, the nervous system, the blood, metabolism, infections, etc. This is both useful from a scientific and practical point of view, as it avoids duplication and promotes a better understanding of the action of drugs. When one is through with say the nervous system, there is a feeling left that the subject from the aspect of this system and the drugs has been exhausted. We would like to see a copy of this book in the hands of every one who is engaged in the active duties of treating the sick or teaching students. Profound and thorough are the proper terms to use with regard to this work.
