Lithographing Department

A decided advance has been made in Lithography by the introduction of the Offset Press. The most interesting feature to the business man is that he can get Lithographed Stationery cheaper than by the old process, but more interesting still is the fact that any kind of paper can be used on the Offset Press, thus giving artistic effects in some instances unobtainable by any other known process. It is impossible in the ordinary way to print direct from a fine screen halftone direct on to paper with a rough surface. By the offset process, very beautiful effects can be obtained from the same materials. Moreover, the Offset Press runs at a speed of from 3,500 to over 5,000 per hour, the output being from 300 to 500 per cent higher than the old process.

We have recently installed an Offset Press of the very latest pattern with a full equipment of the very best machinery necessary to prepare the plates, etc. We have an expert lithographer and offset pressman in charge and we solicit work of the very highest class in one or more colors—Colored Labels, Stock Certificates, Bonds, Debentures and Business Stationery.
