

Local and General News.

JAMES J. BREHAUT
Aged 84 years, James J. Brehaut, Douglassfield, Northumberland Co., died, Oct. 27, leaving three sons and four daughters.

LADIES' AID TEA
The Ladies Aid of St. James Church intend holding one of their usual high class teas on Dec. 9th in the Sunday School Hall. Particulars later.

LECTURE IN CHATHAM
Mr. Lindsay Crawford, Editor of the "Toronto Statesman," will deliver a lecture on the Irish Question, in the Chatham Opera House, Wednesday evening at 8 o'clock.

SHOP EARLY AND OFTEN
The Sale at Mess. A. D. Farrah & Co's, under the direction of the Miramichi Hospital Aid in support of the Nurses' Home is meeting with good success, and all are requested to take advantage of the remaining few days to make their purchases.

IT PAYS TO TOP-DRESS HAY LAND
"Four years ago it paid big. Or, in other words, one dollar spent in fertilizer turned to five dollars in hay. The cost of the fertilizer and the cost of the hay were about the same then. The cost of fertilizer and hay have both risen proportionately since then. It would seem that there was still money in top-dressing hay ground."
—Orange Co., N. Y. Farmer Bureau News.

THIS SOUNDS GOOD
October's mild weather had us all fooled, even old Mother Nature being amongst those taken in. The Natural History Society of St. John has recently received a number of large ripe strawberries picked by John Howe, of Nerepis. Two fully ripened strawberries picked Sunday afternoon, Oct. 31st, on the farm of Dr. A. R. Myres, at Irishtown, were handed the Moncton Times Monday evening. The berries were as fully grown as if picked in July. The Advocate has received a mayflower which was picked in full bloom on Nov. 2nd, by Mr. Daniel Cain of Sunny Corner.

WHAT FERTILIZERS ARE—WHAT THEY DO
Fertilizers are plantfood carriers, pure and simple. They carry just the same plantfood constituents as are supplied by barn manure, but in larger quantities and in more concentrated form; Ammonia, which causes the growth of the straw of grain, the vine of potatoes, and the stalk of corn; phosphoric acid, which increases the yield of grain, hastens its ripening and fills the kernel; and potash, which gives the plant power to resist disease and materially assists in the formation of starch in the grain or tuber, and strengthens straw. Fertilizers carry their guaranteed percentage of plantfood in an available form—that is, in a form in which ammonia, phosphoric acid and potash will dissolve in the moisture of the soil and in the juices of the plant root. Farm crops cannot feed upon solid particles of soil. In order for food to enter the plant, it must dissolve in water or plant, or root juices, so that it can be taken into the plant in solution. Fertilizers supply this readily nutritive food to the young plant the same as the cow supplies readily-digestible food to her calf.

MILK SUBSTITUTES FOR CALF RAISING
Whole milk and skim-milk are becoming so expensive to be used as a feed for raising calves. Farmers and dairymen are therefore confronted with the problems of finding a satisfactory substitute for milk as a calf feed.
The Purdue University Agricultural Experiment Station has been studying the problem of how to find a calf feed that would furnish in easily digestible form the food elements necessary for the young calf. A number of feeding trials have been made with a feed devised by the Dairy Department, and careful records have been kept. The results are as follows:
Beef blood when combined with corn and oil meal in proportion of 8 parts corn meal, 1 part oil meal, and 12 parts beef blood furnishes a reasonably successful milk substitute for feeding young calves. The development of the calves when on pasture indicates that the feeding of this mixture seems not to have impaired or stunted the growth impetus, as the gain in weight of calves fed the above meal was equal to the gain in weight of the milk-fed calves while on pasture.

CEMENT
Our last car for the season of Canada Cement is now on rail, expected this week.

MIRAMICHI HOTEL
CHANGES HANDS
Mr. Edward Dalton has purchased the Miramichi Hotel from Mrs. Thos. Foley. Mr. Dalton will take charge on Friday, November 12th. It is rumored that the price paid is in the vicinity of \$30,000.

ARE NEGOTIATING
Negotiations are now in progress between the shipping interests and the various local organizations of labor for conferences on the question of winter wages. It is hoped that these will lead to working agreements mutually satisfactory, so that the winter business can go forward without delay.

ANGUS McLEAN ON PULP SITUATION
New York, Nov. 4—Angus McLean, vice-president and general manager of the Bathurst Lumber Company, Limited, Bathurst (N. B.), pulp and lumber producer, declared on his arrival here from abroad that Canada will take care of the United States in supply of paper, because of easy transportation and on account of her proximity to Canada's logical market.
England will get her paper and pulp from the Scandinavian countries in greater quantities than heretofore, he said.

"While abroad I discussed the paper situation with Lord Beaverbrook, and it is his opinion that pulp will ease up," said Mr. McLean.
Lord Beaverbrook did not carry out his intention of buying a paper mill in Canada because of "extreme prices asked for property," according to McLean.

Lines to "Clifford Drummond" who died in River Glade Sanitarium, on Oct. 28th, 1920.
Dear Old Pal you volunteered
With the boys of the 104th
The boys whose motto was "carry on"
Who were British to the core
You drilled in British bay, lay out
Till the Army marked you fit.
Then you crossed the channel to
Sunny France
Bloody France to do your bit
You carried on like a Soldier Brave
Facing death both night and day,
But God only knows how oft you knelt
In the cold wet trench to pray
You—"Clifford Drummond" gave your heart
To God long years ago.
But you gave your life tho' you do
not sleep
In that Land where the Poppies
grow
You sleep tonight in Canada,
The land which gave you birth.
And up in Heaven you're with
your Pals
Missing Lads from the "One Hundred and fourth."
A PAL

N. B. Agricultural Summer School

At the New Brunswick School, the students lived under canvas, military bell tents being chiefly employed. The school was put under a camp committee elected from among themselves. The members of the school took turns in camp duties, such as the serving of meals. Five, one-hour, lecture periods were given each day to both the first and second year classes. The work was made as practical as possible. Plants were seen and studied in their natural environments. The purposes underlying farm practices were demonstrated and explained. A feature of the school was the school gardening work. Occasion was taken to give the teacher pupils practical instruction in gardening. To this end each student was required to put in one or more plots in the school garden. They did the marking out, cultivating, staking, and sowing the seed. The garden itself is a laboratory practice garden where the teacher must do the things she would demonstrate to her pupils.
The school is carried out under the direction of Mr. A. C. Gorham, M. Sc., Director of Elementary Agriculture. The instructors were, for Nature Study, William McIntosh; Physics of Farm and Home, Dr. F. E. Toheolock; Cereal Husbandry, O. C. Hicks; Gardening, A. C. Gorham.

ON WAY TO MIRAMICHI
William S. Kinney, Luther Harrington and F. W. MacDonald of Boston are at the Barker House today. They are on their way to the McDonald Camp on the Miramichi which is maintained by Dr. MacDonald a well known sportsman—Telegraph.

The Fall Weather Hard on Little Ones

Canadian fall weather is extremely hard on little ones. One day is warm and bright and the next wet and cold. These sudden changes bring on colds, cramps and colic, and unless baby's little stomach is kept right the result may be serious. There is nothing to equal Baby's Own Tablets in keeping the little ones well. They sweeten the stomach, regulate the bowels, break up colds and make baby thrive. The tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

THE FARM BUSINESS
A farm, to be successful, should maintain its productivity and should return a reasonable wage for the labor of the farmer and his family, after paying farm expenses and deducting a fair rate of interest on the investment.
Four important factors in the success of the farm business are size of business, yield of crops, returns from live stock and efficiency in the use of labor.

What is the size of your farm business?
What part of your investment is in land, buildings, live stock, machinery and other capital?
Is your area properly proportioned to the various crops with regard to profits? With regard to labor distribution?
How do your crop yields compare with the average yields of the locality?
What classes of live stock return you the most money?
How do the returns from your live stock compare with the average of your locality?
How many acres of crops do you raise per man? Per horse?
Is your farm so organized that each part of the business is yielding satisfactory returns?
How much have you left for your own labor, after deducting from your total receipts your year's expenses, value of labor performed by members of your family and interest on your investment?
How much does the farm contribute toward your family living? —Farmers' Bulletin 1139, U. S. Dept. of Agriculture.

\$100 REWARD, \$100
The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages and that is catarrh. Catarrh being greatly influenced by constitutional conditions requires constitutional treatment. Hall's Catarrh Medicine is taken internally and acts thru the Blood on the Mucous Surfaces of the System, thereby destroying the foundation of the disease, giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in the curative powers of Hall's Catarrh Medicine that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

Culling Poultry Flocks

The poultry culling work carried on this year by the Poultry Division of the Ontario Agricultural College is to cull the breeding station flocks, and incidentally give culling demonstrations where agricultural representatives are able to make satisfactory arrangements. In addition to this we have had two men culling flocks in Lanark County for two weeks. They handled during that time about 4,500 hens, of which more than 1,100 were culled out as inferior birds. We also assisted in some culling work in Oxford County arranged for by Mr. G. R. Green, the agricultural representative. All the farmers in one township who desired it could have their flocks culled. Work was done by local men. A charge of three cents per bird was made which was sufficient to pay the wages of the cullers who receive fifty cents an hour for their time. I made it my duty to train the men and to supervise the work, more especially to see that no really good birds were shipped out.
The work which was entirely organized by Mr. Green included the culling of 118 flocks made up of 7,182 hens. Of this number about fifty per cent, or 3,588, were considered good enough to keep. Seven hundred and sixty-eight were regarded as of medium quality to be retained to the end of the present laying period, and then disposed of. Two thousand five hundred and thirty-one were shipped out as culled. Practically all of the culled hens were shipped out in a live stock car.

Aluminum Kitchen Utensils

We can supply Kitchen Utensils in Tin, Enamelled and Aluminium Ware but the Aluminum is the most desirable in every way.

In Appearance
In Economy
In Durability

Aluminum Utensils are light in weight, bright as silver, will not chip or crack, there are no seams to leak, and will wear a generation if you get the good kind known as "Wear-Ever" of which we have a good assortment.
