

## Let's Go To Goobie's

JUST OPPOSITE POST OFFICE.  
It will cost you more to stay away than to come.

**10-Qt. Galvanized Water Pails.**  
WELL DIPPED. LEAK PROOF.  
10-quart Galvanized Water Pail, steel dipped in pure spelter after forming, making leak-proof, double seamed, strong ears, heavy galvanized iron handle; also galvanized hoop on bottom. This article makes a wonderful convenient Wash Bucket. One to a customer. No C.O.D. or Phone or Mail Orders filled on this article.

Our Price, 39c. each.

### Bloomers for Women and Children.

Good quality, fleece lined, elastic waist and knees, reinforced growth, full cut, fitted seams, in Flesh, Honeydew, Navy Blue and Grey.

85c. 87c. 98c. each.

### Alarm Clocks

Nickle plated, seamless, brass, highly polished, loud alarm.

Our Price, \$1.69 ea.

### China Ornaments

We have one of the finest assortments of China Ornaments in the city. Prices 25c. to \$1.50 ea.

### Look at this List:

Liquid Gold Paint . . . 15c.	Fancy Tea Plates . . . 15c.
Kitchen Mirrors . . . 25c.	Were 18c. Now 12c.
Nail Brushes . . . 3c.	Boat Protectors . . . 5c.
Cake Sifters . . . 19c.	Brooms . . . 60c.
Pie Pans . . . 6c. 9c. 10c. ea.	Quick Boiling Kettles . . . 50c.
Goodridge Rubber Cement . . . 10c.	Scrub Brushes . . . 15c.
Whisk Brooms . . . 7c. 10c.	Knives and Forks . . . 30c. ea.
Bedroom Lamps, complete . . . 29c.	Tea Spoons 6 for . . . 25c.
Sewing Machine Oil . . . 15c.	Store Cleaning Dusters, 10c.
	Stove Brushes . . . 25c.
	Hair Clothes Brushes . . . 55c.

Kindly Remember—  
**W. R. GOOBIE**  
is Just Opp. the Post Office

## \$2 FOR THE FAIR

Unique protection for Preferred Risks covering all hazards of travel and other risks during October, including attendance at the Fair. Accidents and injuries of all kinds, no matter where or how sustained, including steamer, train and tram cars, are covered. We pay \$3,444 Principal Sum and \$10.00 Weekly Benefit for a nominal fee of only TWO DOLLARS.

All persons who intend visiting St. John's during October, are requested to get full particulars about this contract.

**U. S. FIDELITY & GUARANTY CO.**  
J. J. LACEY, Nfld. General Agent.

FEARLESS FISHERMEN, THE BACKBONE OF THIS COUNTRY, WILL INSURE WITH ME.

**GEO. W. B. AYRE, L.I.B.**

Special Representative of

The Imperial Life Assurance Company of Canada.

Offices: LAW CHAMBERS, Duckworth Street.

## Man-Made Static

The following list of causes of radio-interference, with advice or suggestions for their elimination, has been compiled by the Radio Committee of the National Electric Light Association. Our quotations are from Radio Retelling (New York). The Committee places direct-current arc-light circuits at the head of its list, and has this to say of them:

The direct-current arc-type street lights are frequently the cause of disturbance to radio listeners. The most likely causes of interference from arc-lights are grounds, loose connections and lamp-jumping. The first two rarely occur, and are easily found and fixed. Lamp-jumping is usually due to one of the following three causes, and can be easily repaired: 1. Broken, chipped or loose flexible globes. 2. Broken or loose flexible-connection-strip from upper electrode to upper electrode box. 3. Broken flexible connection cable to movable clutch-rod.

Other items are specified as follows:

**Street Lights Using Rectified Alternating Current**—Mercury-vapor tubes for rectifying alternating current for street-lighting system sometimes cause radio interference. The vacuum in these tubes changes occasionally, and boiling in water is done to restore the vacuum to the proper point. When these tubes are properly repaired, static disturbances are reduced to a minimum.

**Incandescent Street-Lighting Systems**—In some cases the disturbance from these systems is audible several hundred feet, caused by static leakage across the porcelain base in the lamp itself. Replacement of the defective sockets with new ones eliminates the trouble.

**Elevator Controls**—Elevator motors and controls are the source of disturbance frequently difficult to remedy. Most of the disturbance originates in the contact in the elevator shaft, as the operator of the car moves the control-handle back and forth. Sparking of the motor and control equipment also cause trouble.

**Thermostats**—Thermostats are now used to control dozens of different forms of devices, ranging from large industrial undertakings to the furnace in the home. Thermostats sometimes cause disturbance, depending upon the size of the controls and the amount of current they are handling. Condensers and radio-frequency chokes properly placed will eliminate these disturbances.

**Heating Pads**—The make-and-break contact thermostat in some of these pads has caused trouble, which can be remedied by proper attention to the design of the equipment.

**Small Motors in the Home**—Caused by sparking of the commutator. The cleaning of these commutators, and installing of new brushes from time to time will reduce the disturbance to a minimum.

**Small Motors in Industry**—Small motors using direct-current are frequently sources of disturbance, covering limited areas, and usually confined to the place in which they are installed. Dirty and worn commutators and sparking brushes cause most of the disturbance. Connect a condenser across the motor leads, with the grid-point grounded.

**Slip-Ring Alternating Current Motors**—When these are subject to heavy load, and also when pitting and corrosion of the slip-ring occur, causing sparking, radio disturbance is likely to occur. Proper repair and attention to the condition of the motor will eliminate much of this disturbance.

**Battery-Charging Devices**—Vibrating, mercury-vapor, vacuum tubes and other forms of battery-charging devices will interfere with radio reception for several hundred feet. Much of the trouble can be eliminated by the judicious use of condensers and chokes.

**Electric-Sign Flashers**—These de-

vices affect radio reception for a considerable distance, depending upon the amount of current being consumed through the flasher. One case of this kind was eliminated by placing the flasher inside of a metal box, which was grounded. Trouble from this source has been observed as far as five hundred feet.

**Precipitators and Treators**—These devices usually employ rectified high voltage alternating current, obtained by means of a rotating gap. The voltage of this device ranges from 50,000 to 150,000. There are several types, the two primary groups being those for precipitating carbon particles from smoke, and the other one being that used in treating chemicals and mineral vapors in "treator" or precipitation tanks. These devices sometimes cause trouble at a distance of fifteen miles from the source, depending upon the voltage and the arrangement of the rotating gap.

There is generally no difficulty in locating the source of such disturbance with a sensitive receiving set, equipped with a sharply directional loop. These disturbances can be minimized by the insertion of a large radio-frequency choke coil between the gap and the bus-bar, where many leads branch out to the separate treating operations.

**Flour-Bleachers**—Some of these bleachers employ 50,000 volts, rectified alternating current. The disturbances may be heard over an area of ten square miles. The design of this device is similar to that of the precipitators.

**Gas-Engines Ignitions**—The make-and-break system of ignition used on gas-engines will usually set up a disturbance for several hundred feet. The usual method employed is to insert radio-frequency chokes to correct this.

**Telegraph Offices**—These have been a source of disturbance for a block or so around, because of the constant making and breaking of circuits by keys and relays. Unless every key and every relay is furnished with a pair of condensers with the mid-point grounded, there does not seem to be much hope for eliminating this type of disturbance.

**Large Organs**—Each key on the organ and each stop is equipped with a small magnet, and as the organist runs over the keys a contact is made and broken as he touches and releases the keys, in each case setting up a small disturbance representing sharp static. In view of the fact that there are 800 pairs of wires in such large organs, this has been a difficult case to solve.

Some progress has been made in eliminating this type of interference by inserting condensers and resistances in the main lead from the generator supplying the ten-volt current for its operation.

**Telephone Bell Ringers**—This is an intermittent interference. Where the telephone exchange is located in the heart of a town or village, the constant ringing of the many bells forms a source of disturbance which seriously interferes with radio reception. The usual method employed to correct this interference is to insert radio-frequency chokes in the leads.

Street Railways—Radio interference is caused by faulty condition of tracks and overhead wires, and by defective rail bands, and defective wheels on trolley-poles which, becoming badly pitted and corroded, cause excessive sparking.

**The Welcome-Home**  
THE PRINCE TO MAKE A SHORT TOUR OF LONDON.

Plans are being formulated for the reception to be accorded the Prince of Wales on his return from his tour on October 16.

It is understood that the reception will be similar to that accorded his Royal Highness on his return from Australasia. Members of the Royal Family will be at Portsmouth to meet the Repulse, while the King and Queen will await the Prince's arrival at Victoria. Members of the Government will also be in waiting at the station and before the Prince goes to Buckingham Palace and on to York House he will make a short tour of London to satisfy the desire of the hundreds of thousands of people who wish to be among the first to welcome him home.

After his return the City of London will, it is expected, invite the Prince to accept a royal address.

**Playing Both Ends Against the Middle**

One of the witnesses at a royal commission appointed to inquire into a case of alleged bribery in an election, stated that he had received \$25 to vote Conservative, and in cross-examination it was elicited that he had also received \$25 to vote Liberal.

Mr. Justice Mathew, in amazement, repeated: "You say you received \$25 to vote Conservative?"

"Yes, my lord."

"And you also received \$25 to vote Liberal?"

"Yes, my lord."

"And for whom did you vote at the finish?" asked the astonished judge, throwing himself back in the chair.

The witness, with injured dignity in every line of his face, answered with great earnestness:

"I voted, my lord, according to my conscience."—Vancouver Province.

**In Moscow Pay**

£4,000 EACH TO 40 MEN TO MAKE TROUBLE IN ENGLAND.

Captain S. R. Streetfield, prospective Unionist candidate for the Durham division, repeated at Durham the statement which he made recently that a list existed showing that certain extremists were receiving salaries and other money from Moscow to create trouble in this country.

"Thirty or forty of these extremists during the last few years," he said, "received in bonuses £4,000 each from Moscow."

"Male Communists of suitable age are instructed to take every opportunity of joining the Territorial Force, so that they may have ready access to rifles and ammunition. All these things point the same way—to armed revolution."

**Eve's Appetite**

"One day," said a story-teller, "at the close of a hot day, Adam was returning with his axe on his shoulder from a hard day's labor to his humble cottage. Maybe it was a cave. That don't matter; for it was a humble abode. Young Cain was running ahead, boylike, throwing rocks at the birds. Suddenly they came upon a beautiful garden.

"O father," said Cain, "look at that beautiful garden. I wish we could live there."

"We did live in that garden," said

**ETHELIND TERRY**, playing with Eddie Cantor in Zeigfeld's Musical Comedy, "Kid Boots," writes:

"Women of the Latin countries, whose hair is seldom fluffy, are many of them able to wear their hair severely smooth and shining, but American women could never have adopted this charming fashion to generally if that remarkable cream, Stacomb, had not been introduced."—aug 4, 11 (1)

Adam regretfully, 'till your mother ate us out of house and home." The Christian Evangelist.

A small hat of oakwood velours has its brim turned up in turban effect and knotted at the back, so that an end protrudes at one side.

**Fads and Fashions**

A delightful outfit is the plaid skirt of crepe de chine and matching jersey jumper.

Handkerchief points may still quite smartly cascade around the hem of one's skirt.

One of the most attractive of the new evening slippers is of brocade silver leather.

It seems that the back flare is still on trial as front and side flares are still good.

A quilted lining of fuchsia satin, is used in a black duvetyne coat trimmed with seal.
