**STRONG APPEAL BY MISSIONARIES FOR THE CHINESE FIELD**  
Teachers in Honan College  
Address Women's Auxiliary of Huron Diocese.

"Pray, give and go must be the intended watchword of the church," declared Miss Macintosh, Anglican missionary to China, addressing the delegates to the annual conference of the Women's Auxiliary, Diocese of Huron, at Chong Hall last evening. For the past five years Miss Macintosh has been teaching in the St. Mary's School for Girls in Honan, China, returning to Canada in February last.

"Why must we pray?" continued the speaker, "Because from my experience in China I am convinced that your prayers are heard by Him. Furthermore, our girls believe in prayer. In your duty to uphold them and your missionaries, as well as by a strict devotion to prayer."

"Why must one go to China? Because the Diocese of Honan has a population of some thirty-five million, and the Canadian Church of England has assumed full responsibility for this great mass. It is not altogether the question of money."

"We must have volunteers and must have them at once, and the issue confronting us is whether Jesus Christ meant you, when he said 'Go ye into the world and preach the gospel.' Who shall go? He means you, with the gifts and qualifications, and it may be startling for you to learn that not one new applicant has been yet accepted to enter into training this fall for the foreign missions. The speaker spoke of the momentous issue and we need right at this moment those of intellectual and executive ability who are willing to give up all for work in that distant land. Mothers do not stop your older children who express a fervent desire to take up this work. It is because of you that today we find ourselves without the adequate number to properly carry on. Do not keep these young people from the great joy of their service, coupled with the privilege of bringing happiness and light where before reigned wretchedness and misery."

mission field of the East. "I have been asked," he explained, "what is our greatest need? I answered that we must have personal service, especially in the medical department. But we are looking forward to great things from now on. I can only tell you that the gates are open and the barriers down. It is for you to decide if we are to enter therein."

Right Rev. David Williams, bishop of Huron, presided, and spoke briefly of the splendid work being accomplished by the missionaries in those places far afield. The bishop touched on the utmost importance of a concentrated effort being made to Christianize China, that great country, wherein the masses slowly but surely are drifting from their old gods and groping for the new truth.

**WESTERN PROFESSOR STRONG SUPPORTER OF DR. JOHN B. DEEVER**  
Declares Antivivisection Activity Due to Lack of Scientific Knowledge.

Following a paper read before the Western Ontario Academy of Medicine on Tuesday on "The Perverse Activities of Anti-vivisectionists," by Dr. John B. Deever, M.D., D.S.S., LL.D., professor of surgery at the University of Pennsylvania, Dr. F. R. Miller, M.B., chief of the department of physiology at Western Ontario Medical School, said:

"I feel we are all very much indebted to Dr. Deever for coming here from the University of Pennsylvania and giving us this admirable defence of animal experimentation. Coming from such an eminent authority as himself, his words carry added weight. It will doubtless continue to make important advances through purely bedside studies. Nevertheless, there will always be an important class of problems which can only be solved by an appeal to actual experiment. Here alone it is possible to control the variables and to reduce conditions to the simplicity required by the scientific method."

"The existence of the anti-vivisection movement depends, in my opinion, on the appalling lack of scientific knowledge among otherwise well-educated persons. Intelligent persons are well versed in literature and history, but know little or nothing of physics, chemistry and biology. The opinions of many people depend not on logic or reasoning, but rather on emotional sympathies and the desire to simulate their friends and associates."

"The cultivation of a wise and sane public opinion on medical matters can, I think, be encouraged by means of newspaper articles on public health, such as are being published by Dr. H. W. Hill, director of the Institute of Public Health."

"Scientific investigations of the kind referred to have received the official sanction of the British Government. Licenses for the purpose are issued to qualified doctors by the home secretary. The researches are carried on under adequate anaesthesia; indeed, as Dr. Deever said, the conditions are exactly those of a surgical operation on a human being. Surgery was invariably under the supervision of the professor of a medical school like that at Oxford, Cambridge or London."

"I take great pleasure in moving a sincere vote of thanks to Dr. Deever for his splendid address."

**KAWARTHA LAKES.**  
"Kawartna," to the Indian, means "bright waters and happy lands." The Kawartna chain constitutes one of the most popular of Ontario's summer playgrounds. The lakes are six hundred feet above the level of Lake Ontario, and the climatic conditions are most agreeable and healthful. Every form of outdoor recreation may be indulged in there being unlimited opportunities for sailing, canoeing and motor-boating, for bathing and for fishing. Bass, muskies and salmon trout are caught in the large lakes, while there is good fishing for speckled trout in the smaller lakes in the district. The region is easy of access, being within 125 miles of Toronto on the Grand Trunk Railway System. Write for illustrated descriptive literature to any Grand Trunk ticket agent, or C. E. Honning, D. P. A., Toronto, Ont.

Perhaps you want a domestic in a hurry. Then use The London Advertiser classified columns and you will be quickly supplied because everybody reads The London Advertiser.

**COAL IS POTENTIAL HEAT**  
You should select your coal with a view to the amount of heat per ton it will yield. Our coal is clean, free burning, and economical. It has the smallest percentage of waste.

**ALL REPORTS READ AT W. A. CONVENTION TELL OF PROGRESS**

**Membership in Diocese Now 2,680, With 113 Senior Branches.**

Yesterday afternoon's session of the W. A. was spent in the reading of reports of the diocesan officers, all of which showed the auxiliary to be growing in finance, membership and work undertaken. The W. A. membership now stands at 2,680, with 113 senior branches, according to the report of the recording secretary, Mrs. Nash. Thirty new life members have been received during the year. The memorial scholarship fund, the objective of which is \$2,000, has reached the \$1,500 mark, and the interest is being used to help a young Chinese girl. This was an interesting item from the report of the treasurer, Miss Adelaide Smith, \$1,063.49 is the amount for voting on this year towards appeals, which, together with a generous proportion of the splendid thank offering of \$1,550, will amount to a goodly sum.

**Dorcas Report Read.**  
The Dorcas society's report read by Miss A. H. Gover is always an interesting one. During the past year 77 bales have been sent to Northwest missions, containing quantities of new clothing, old clothing, quilts, material, carpets, sheets, pillow cases, towels, blankets and many other articles, as well as groceries, dried apples, canned fruit, outfits for 56 pupils, and contributions to the uniform and boot fund. Bales have also been sent to overseas mission fields.

Mrs. Shore reported for the girls' work, which is going ahead splendidly, except for the lack of leadership, and a diocesan girls' committee is to be appointed at this annual meeting to discuss the situation regarding leaders. There are now 24 girls' branches, an advance from 21 of last year. The membership has increased from 312 to 325, and their giving has increased \$170.35, the total amount being \$1,625.35.

The Junior branches number 50 with a membership of 1,325. The branch this year is All Saints, Windsor, according to the report of Mrs. Bowen, the junior secretary, read yesterday.

**Zenana Branch Report.**  
Mrs. Battersby, reporting as the Zenana secretary, said that eight children were now supported by the W. A. in Kangra, besides which four girls were supported in Miss Strickland's school in Tarn Taran, and two in Miss Cammichael's nursing, making the total number of children supported to be 14. Mrs. Waller, the educational secretary, reported that four missionaries' children were being supported through the efforts of Zenana. Mrs. Waller, the educational secretary, reported that four missionaries' children were being supported through the efforts of Zenana.

**Three to Foreign Field.**  
Mrs. Gahan, the diocesan candidates' secretary, had no new candidates to report this year. During the past year, however, several candidates have been sent to the foreign field. Miss Francis Hawkins of Hamilton to Mid-Japan; Miss Ruth Jenkins of Ottawa and Miss G. Trivett to Honan, China. Others are in training. Several women have also been sent to do missionary work in Canada. Other reports were read by the recording secretary, Miss Kate Elliott:

**Little Helpers by Miss Harriett Priddis.**  
Literature by Miss S. J. Moore, lectured by Mrs. Anderson, deaconess work by Mrs. Dolf, and prayer partner by Mrs. Gahan.

The resolution committee was also appointed yesterday afternoon, and included Mrs. Newton, Samia, convener, Mrs. Wrong, Aylmer, Mrs. McDonnell, Stratford; Mrs. Perkins, Chatham; Mrs. Robinson, Stratford; Miss Sutton, Dorchester; Mrs. McCall, Simcoe; Mrs. Rice, London, and Miss Dicks, Galt. The president's address completed the program for the afternoon.

**Leading Wheat of West.**  
"Marquis wheat was found to be a new variety in the province. It was discovered in 1903 and in 1906 passed the baking tests well. It was sent to Indian Head Experimental Farm, and was 2 1/2 times better than the other varieties. This attracted considerable attention, and in 1915 it was the leading wheat of the West. There was one plant in 1903. In 1915, in the United States and Canada, there were 300,000 bushels, and today 80 per cent of the Central and Western Canada wheat grown is Marquis, and in the North-western States is 50 per cent of the wheat grown there."

"It is not a question of how much it is worth," he continued, "but its value over other wheats grown. During the war, in Manitoba, Saskatchewan and Alberta, Marquis wheat annually put thirty million dollars in the pockets of the farmers who otherwise would not have come by other varieties. The Government spends not more than \$50,000 annually on cereal research work, so this is a very good business return. I have heard much of the thirty millions, and am tired of it, not having had much of it myself. I have produced many small varieties of wheat, also barley and peas."

**DR. SAUNDERS TELLS STORY OF MARQUIS WHEAT**

**Professor Henderson, Ann Arbor, Also Speaks At Western Convocation Dinner.**

**150 GUESTS ARE PRESENT**

**Next Twenty-Five Years Is Crucial Time in World, Says Michigan Scholar.**

Good fellowship between members of the faculty, graduates and undergraduates of Western University prevailed at the convocation dinner held at the Tecumseh Hotel Wednesday evening. There were about 150 guests present, and members of the graduating classes occupied places of honor at the head of the banquet table, wearing a gown. Undergraduates were seated about the banquet hall, and during the evening enlightened things with class yells, and a sing song, while music was provided by the Cortesi Orchestra.

The principal speakers were Dr. Charles E. Saunders of Ottawa, a former Londoner, who related his experiences in research work, leading up to the discovery of Marquis wheat, and Prof. W. D. Henderson, head of the extension department of the University of Michigan, who took for his subject "The University and the People." Other features included a very satisfactory report by Miss Margaret Gemmel, and the medical valedictory, by Manley G. Peever. The former referred to the growth of the graduating class in arts, due to the return of students whose academic work was interrupted by war service, and the new Western University, stating that her class had passed through the crucial period of her alma mater.

**Tribute To the Late Dean.**  
Dr. Peever paid a tribute to the late Dr. H. A. McCallum, Dean Emeritus of Western University Medical School, who had passed away during the course of the graduating class. He also referred to the transformation of training facilities provided in the acquisition of a new and up-to-date equipped medical school. His remarks and humorous stories kept his audience in an uproar during the delivering of the Med's valedictory.

Dr. Saunders began his address by presenting three questions to those present, namely: "How Did Marquis Wheat Come to be? How Was It Discovered, and What Good Has It Been?" He then proceeded to answer these queries himself, and in this manner related the history of the great cereal. He declared that the true origin of Marquis wheat, which has proven a boon to the Canadian and United States western districts, was at his former home in Canada, since he, when as a boy he observed his father crossbreed grapes. Later, when the latter was appointed director of experimental farms at Ottawa, in 1886, he acquired success in crossbreeding other fruits.

**Was Father's Idea.**  
The idea of performing the same experiment with cereals came to Dr. Saunders' father, but was rejected by the latter. He was converted to it in 1910. Owing to pressure of work, Dr. Saunders and his brother were delegated to this task by their father. "It is easy to crossbreed fruits," declared Dr. Saunders, "but with cereals, which are annuals, first thing you know, you have not got it, as it is only temporary. Plant by plant was systematically selected for six to ten years for varieties, and here the work stopped for ten to fifteen years. Father was busy, and I was left an immense amount of material, 98 per cent of which was rubbish, and 2 per cent treasure. In 1920 I studied certain plants, many of which were extremely promising. The starting point of new varieties was here, and my system of testing was very novel. This was by chewing the heads, and studying their chewing gum qualities to determine the value of the baking qualities. Baking tests confirmed them."

"Marquis wheat was found to be a new variety in the province. It was discovered in 1903 and in 1906 passed the baking tests well. It was sent to Indian Head Experimental Farm, and was 2 1/2 times better than the other varieties. This attracted considerable attention, and in 1915 it was the leading wheat of the West. There was one plant in 1903. In 1915, in the United States and Canada, there were 300,000 bushels, and today 80 per cent of the Central and Western Canada wheat grown is Marquis, and in the North-western States is 50 per cent of the wheat grown there."

"It is not a question of how much it is worth," he continued, "but its value over other wheats grown. During the war, in Manitoba, Saskatchewan and Alberta, Marquis wheat annually put thirty million dollars in the pockets of the farmers who otherwise would not have come by other varieties. The Government spends not more than \$50,000 annually on cereal research work, so this is a very good business return. I have heard much of the thirty millions, and am tired of it, not having had much of it myself. I have produced many small varieties of wheat, also barley and peas."

"I am trying to point it out to the heads of the public," concluded Dr. Saunders, "that applied science pays, and Marquis wheat is a striking example. Science is its own reward. London will not be known by what it produces or manufactures commercially, but by its men and women, and the graduates of Western should have a great influence on the progress of the community." The speaker varied his address with several humorous remarks which entertained those present.

**Speaking of "The University and the People," Prof. Henderson began: "Canada is the land of my birth, and 49 years ago, when I was 6 years of age, my parents passed through London en route from Ingersoll to the State of Michigan. The people on the other side of the river look upon Canada with a feeling of sisterhood. The war did two things: It showed the United States were very proud of Canada. Every victory won by the Canadian soldiers counted to them as victory for North America, and they rejoiced, and were sad when Canada had sorrows. The war brought us closer together than some of you suspect, and I think has given to all English-speaking nations of the world, and especially America, Austria and New Zealand, a feeling of solidarity never had before."**

**Applied Science Pays.**  
"I am trying to point it out to the heads of the public," concluded Dr. Saunders, "that applied science pays, and Marquis wheat is a striking example. Science is its own reward. London will not be known by what it produces or manufactures commercially, but by its men and women, and the graduates of Western should have a great influence on the progress of the community." The speaker varied his address with several humorous remarks which entertained those present.

**Speaking of "The University and the People," Prof. Henderson began: "Canada is the land of my birth, and 49 years ago, when I was 6 years of age, my parents passed through London en route from Ingersoll to the State of Michigan. The people on the other side of the river look upon Canada with a feeling of sisterhood. The war did two things: It showed the United States were very proud of Canada. Every victory won by the Canadian soldiers counted to them as victory for North America, and they rejoiced, and were sad when Canada had sorrows. The war brought us closer together than some of you suspect, and I think has given to all English-speaking nations of the world, and especially America, Austria and New Zealand, a feeling of solidarity never had before."**

**Next 25 Crucial Years.**  
"The next 25 years will, in my opinion, be the most crucial in the world's history, and the character of the civilization of tomorrow is going to depend upon the English-speaking people, other than those of Europe, not regarding those of Europe, as their children, and their children's children will bow their heads to pay the debt biologically and economically. It will depend upon the English-speaking peoples and how they regard and feed to each other."

**Must Go to People.**  
"Your strong recognition at Western has been similar to ours. If the people support a university there are certain responsibilities, and that is where extensions comes in. There are great possibilities in it. If the people are going to give to us we have got to get very close to the people. The university must go to the people. They will not come to it. That is the notion that the university is for a select few separated from themselves, and that is a bad thing. You have the problem to keep in touch with the province, to go ahead."

The speaker who interspersed his remarks with funny stories, concluded by explaining extension work with its free lectures, credit courses, debating clubs and library extension, and declared it to be "a most fascinating task." He warned Western not to make the same mistake as the University of Michigan in providing the new buildings, the latter institute having failed to acquire sufficient land to build for the future. He also urged that Western be not carried to the opposite extreme in having the new buildings too widely separated. "You cannot tell how far Western will go," he said.

During the evening Hugh Fletcher, Meds '23, and Leon Adams, Arts '24, entertained the guests with songs.

**DELINQUENT TAXPAYERS**  
None Have Had To Be Brought Into Court as Yet, State Income Officials.

Contrary to expectations of a few days ago, the officials of the income taxation department have not as yet been compelled to actually bring any of the delinquent taxpayers into the courts. Quite a number of citizens, it was discovered after the office closed for collection, had either neglected or disclaimed to forward their respective amounts due.

Naturally it was fully expected that in these instances it would be necessary to institute drastic proceedings and have the offenders brought before the authorities.

It has developed fortunately for everyone involved, the tax officials say, that in every case the individuals have recognized their own position apparently and to avoid possible unpleasantness has "paid his shot." This includes also the additional penalty charges laid down which, in a few instances, were said to be fairly large.

**APPOINTMENT OF NEW POSTMASTER CONFIRMED**  
Thomas C. Duncan, Deputy for Nine Years, To Succeed Dr. MacDonald.

His appointment as postmaster for London officially confirmed, Thomas C. Duncan will succeed the present incumbent of that office, Dr. Peter MacDonald on July 1. Who will succeed Mr. Duncan has not yet been named, but it is expected that a member of the local office will be chosen. Appointed as deputy postmaster in

July, 1902, Mr. Duncan has held that position for nineteen years. The retiring postmaster succeeded John Cameron in 1909.

Mr. Duncan intimated that he was not contemplating any changes in the local office at the present time.

**ECZEMA**  
You are now experiencing it when you use Dr. Chase's Ointment. It relieves at once and gradually heals the skin. Sample box Dr. Chase's Ointment free if you mention this paper and send 20 stamp for postage. 40c a box, all dealers or Edmundson, Bates & Co., Limited, Toronto.

**AN INTERESTING collection of high-grade timepieces, both watches and clocks, made by the Waltham Watch Company, is now on display in our downtown windows. The collection is comprised of several beautiful models of the well-known Waltham watch, combined with the new Waltham mantel clocks.**

The display is well worth seeing.

# MOFFAT ELECTRIC RANGES

CUT THE COST, COOL THE KITCHEN, AND MAKE THE MEALS WORTH WHILE

**GLASS FEET FREE**  
We have a limited number of glass feet for Moffat Electric Ranges, and while they last we will give a set FREE with every Moffat Range sold.

When all is said and done, it is pretty well admitted that there was a toothsome and flavor to the foods cooked by the old-fashioned wood stove that are absolutely missing when the cooking is done by gas. The steak or roast wasn't dried out, the juices became delicious gravy and all that makes a meal worth while was to be found in the dinner.

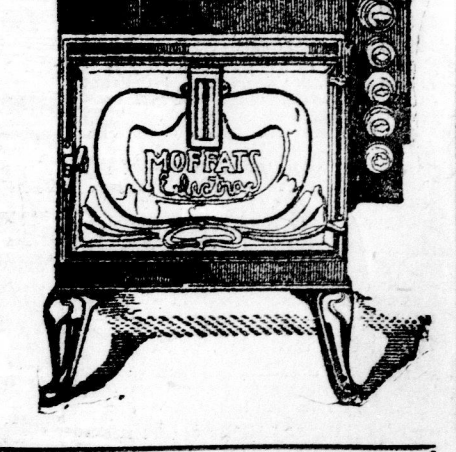

But cooking the meals on a wood stove was torture for the housewife in ordinary weather and a nightmare in summer. Moreover, as time went on, wood cooking, and even coal cooking, became too costly, and gas, no cheaper, but more convenient and cooler, became the general fuel for preparing meals.

Then hydro came, and the cheap white coal of Niagara brought with it emancipation for the housewife, lower fuel costs for the home and better and more appetizing meals for the family.

MOFFAT ELECTRIC RANGES make the ordinary housewife into a jewel of a cook! Nothing is left to chance, and the man who expects cakes, pies or bread like mother used to make, and a roast that tastes like it used to when he was a boy, will never be disappointed when hydro does the cooking.

Hydro has all the advantages of cooking by wood and none of its disadvantages. It is infinitely cheaper, cooler and more up-to-date. Hydro will cook the meals for a third the cost of gas, which it has relegated to the discard with wood and coal.

Quick heat for frying or boiling. No dirt, smoke, fumes or grease. Just turn the button and the Moffat Electric Range does the rest. Demonstrations every day.

**ORDER NOW AND ENJOY ELECTRICAL COOKING IN HOT WEATHER.**  
**THE HYDRO SHOP**  
DUNDAS AND WELLINGTON STREETS.  
TELEPHONE 7000.

**EASY TERMS**  
By paying only a small amount down you can have the immediate use of this wonderful electric range. Pay the balance in convenient instalments with your monthly lighting bill.
