Home-made Remedy Stops Coughs Quickly

You might be surprised to know that the best thing you can use for a severe cough, is a remedy which is easily prepared at home in just a few moments. It's cheap, but for prompt results it beats anything else you ever tried. Usually stops the ordinary cough or chest cold in 24 hours. Tastes pleasant, too—children like it—and it is pure and good. Pour 2½ ounces of Pinex in a 16-oz. bottle; then fill it up with plain granulated sugar syrup. Or use clarified molasses, honey, or corn syrup,

fied molasses, honey, or corn syrup, instead of sugar syrup, if desired. Thus you make 16 ounces—a family supply—but costing no more than a small battle of ready mode consmall bottle of ready-made cough syrup.

And as a cough medicine, there is really nothing better to be had at any price. It goes right to the spot and gives quick, lasting relief. It promptly heals the inflamed membranes that line the throat and air passages, stops the annoying throat tickle, loosens the phlegm, and soon your cough stops entirely. Splendid for bronchitis, croup, hoarseness and bronchial asthma. of ready-made cough

Black and white pepper both come from the pepper plant, a climbing perennial shrub which grows in the East and West Indies, chiefly in Sumatra. black pepper the berry is picked before it is quite ripe; or white, it is allowed to mature and the black pericarp or hull is then removed. The characteristic called piperine, and to a volatile oil. In black pepper berries, the ash is about four and a half per cent, and should not be more than six and a half: either extract, including piperine and resin is about six and a half per cent; crude fibre about sixteen per cent, and there is present some starch and nitrogenous material. White pepper contains less ash and less cellulose because the woody outer covering is removed.

Ground pepper is often much adulterated; the common adulterants are cracker crumbs, roasted nut shells and fruit stones, charcoal and cornmeal, pepper or mustard hulls, and buckwheat middlings. Also an excessive amount of sand adhering to the berries as they wrinkle in drying should be classed as dulteration. Most of these adulterations are evident under the microscope. The Government standard for good pepper is seven per cent total ash, fifteen per cent fibre, twenty-five per cent Road Presbyterian, the Askin starch, and six per cent non-volatile ether extract.

As pepper is properly used only in small quantities, it has no food value, and there is no great difference be-tween black and white in digestive effect, it being largely a matter of habit and personal preference. For pickles it is probably wise to buy the pepper corns whole to use instead of the ground pep-
