

Do not forget
to file your

Income Tax Return

on or before the 30th of April, 1920.

Dominion of Canada

Department of Finance

ALL persons residing in Canada, employed in Canada, or carrying on business in Canada, are liable to a tax on income, as follows:—

1. Every unmarried person, or widow, or widower, without dependants as defined by the Act, who during the calendar year 1919 received or earned \$1,000 or more.
2. All other individuals who during the calendar year 1919 received or earned \$2,000 or more.
3. Every corporation and joint stock company whose profits exceeded \$2,000 during the fiscal year ended in 1919.

Forms to be used in filing returns on or before the 30th of April, 1920.

ALL INDIVIDUALS other than farmers and ranchers must use Form T 1.

FARMERS AND RANCHERS must use Form T 1A.

CORPORATIONS and joint stock companies must use Form T 2.

Penalty

Every person required to make a return, who fails to do so within the time limit, shall be subject to a penalty of Twenty-five per centum of the amount of the tax payable.

Any person, whether taxable, or otherwise, who fails to make a return or provide information duly required according to the provision of the Act, shall be liable on summary conviction to a penalty of \$100 for each day during which the default continues. Also any person making a false statement in any return or in any information required by the Minister, shall be liable, on summary conviction, to a penalty not exceeding \$10,000, or to six months' imprisonment or to both fine and imprisonment.

2

General Instructions.

Obtain Forms from the Inspectors or Assistant Inspectors of Taxation or from Postmasters.

Read carefully all instructions on Form before filling it in.

Prepay postage on letters and documents forwarded by mail to Inspectors of Taxation.

Make your returns promptly and avoid penalties.

Address INSPECTOR OF TAXATION,
LONDON, ONT.

R. W. BREADNER,
Commissioner of Taxation.

FRUIT MEN WANT GIRLS.

Government Asked to Continue Assistance in This Matter.

At the concluding session of the convention of the Ontario Fruit Growers' Association, a resolution was passed requesting the Government to continue the plan of enlisting women and girls for work on the fruit farms of the province. All members were enthusiastic over the mutual benefit that had resulted from such work in the past. Miss M. C. Strath, of the Dominion Council of the Y. W. C. A., was present and called attention to various difficulties that occurred in carrying on the camps in past seasons.

Some camps had been overcrowded unexpectedly at times and others did not get the full quota of girls arranged for; this had interfered with proper and adequate accommodation. The camps often had to pay higher prices for fresh vegetables in the fruit districts than the same could be bought for in Toronto. Lack of storage at some camps made it impossible to buy and handle supplies in large quantities. Wages of housekeepers had increased. All these things resulted in a deficit.

Miss Strath suggested that the fruit growers might help to relieve these difficulties by assisting the camps to purchase supplies locally at reasonable prices. The growers were asked to formulate some scheme to help make the camps pay.

The Federal and Provincial Governments were urged, by resolution, to give special consideration to the undesirable state of affairs that had arisen through the country losing the services of many qualified men in agriculture and horticulture owing to more attractive financial conditions elsewhere and in other lines of industry; and to take steps to retain in Canada all men who had demonstrated their worth and ability in the public service.

Cost of Raising Heifer.

According to recent reports, there are more than 23,000,000 dairy cows in the United States. The average productive life of the dairy cow is not more than six years, which means that the farmer with 12 cows must have two heifers coming into milk every year to maintain the number of animals in his herd. It means also that the whole number of cows in the United States must be replaced every six years, and that approximately 4,000,000 must come into maturity each year in order to maintain the number of cows in the United States. This number does not provide for increasing the total to meet the demands of the ever-growing population of the country. Not only is this population increasing, but a knowledge of the value of dairy products has brought about a greater consumption, the demands for which must be met in some way. The cow does not usually become productive until she is at least two years old. The number of unproductive dairy heifers to be maintained in an immature condition is approximately 3,000,000. It costs about \$70 for feed to raise a dairy heifer to the age of two years. This means that the farmer with twelve cows must of necessity raise two heifers each year, or that he must at all times have on hand four unproductive heifers. At \$70 a head for cost of feed alone, this represents an investment of \$280, simply to ensure maintenance of the number of animals in the herd. The dairy industry in the United States has approximately \$500,000,000 invested in these unproductive animals. Regardless of the cost, the dairy business must be maintained and these heifers must be raised.—Holstein-Friesian News.

Liable to Attack of Anthrax.

A contagious disease caused by a microbe bacillus anthracis. Human beings and all animals are liable to anthrax. The disease is seen chiefly in cattle, pigs and sheep, but not uncommonly in horses.

The disease shows itself suddenly. It is very fatal and usually lasts 48 hours. It does not often spread with rapidity from animal to animal, but may affect a number of swine at the same time if they have been fed on anthrax fish or organs.

A beast which a short time before appeared to be well is found dead or in a dying condition; frequently blood oozes from the nostrils and the anus. In cattle there are no typical symptoms, but in horses and pigs the throat is often found to be swollen.

The carcass is swollen. Blood is found around the nostrils and anus. The muscles are often infiltrated with blood at certain points. The lungs and glands are congested. The spleen is very much enlarged; it is softer and darker than normal, and its substance usually resembles tar.

In equines, anthrax infection not infrequently manifests itself by the appearance of extensive subcutaneous swellings, frequently involving the brisket or the lower surface of the abdomen. In this form the progress of the disease is less rapid and animals occasionally recover.

War Want Owners

Every man who has served his country is proud to have and show his service medals. There are several hundred 1914-15 Stars unclaimed in the District Record Office, London, Ontario. Only those who were in France early in the war are entitled to these. Many soldiers on leaving the army have not informed the authorities as to their changes of address. In the Guide-Advocate office we have a list of unclaimed stars for consultation. If our readers know of anyone who may be entitled to this star please tell him to consult list and write to D. R. O at once, quoting his Regimental Number and Unit served with in the Field as means of identification.

Women and Asthma.—Women are numbered among the sufferers from asthma by the countless thousands. In every climate they will be found, helpless in the grip of this relentless disease unless they have availed themselves of the proper remedy. Dr. J. D. Kellogg's Asthma Remedy, despite its assurance of benefit, costs so little that it is within reach of all. It is the national remedy for asthma, far removed from the class of doubtful and experimental preparations. Your dealer can supply it.

For Asthma and Catarrh.—It is one of the chief recommendations of Dr. Thomas' Electric Oil that it can be used internally with as much success as it can outwardly. Sufferers from asthma and catarrh will find that the Oil when used according to directions will give immediate relief. Many sufferers from these ailments have found relief in the Oil and have sent testimonials.

Double Advantage of Hogs.

A most excellent way of harvesting a large part of the corn crop is to "hog it down." The hogs do the work with even less waste than if the corn is harvested by hand. Furthermore, they make better gains than when fed. Thus there is a double advantage.

Poultry Notes.

It is important to give the fowls pure water.

Weed out all scrub chickens and buy pure-bred stock.

Early-hatched chicks escape many warm-weather diseases.

Small but Potent.—Farneser's Vegetable Pills are small, but they are effective in action. Their fine qualities as a corrector of stomach troubles are known to thousands and they are in constant demand everywhere by those who know what a safe and simple remedy they are. They need no introduction to those acquainted with them, but to those who may not know them they are presented as the best preparation on the market for disorders of the stomach.

A Wily Scientist.

The late Prof. Haeckel put a rather neat one over on Mr. Carnegie a decade or so ago. It happened thus: Old Andrew was a great admirer of Haeckel and he commissioned a young man who was about to become a student at Jena to get for him the professor's autograph. It arrived a few weeks later in this form: "Ernest Haeckel acknowledges the receipt from Andrew Carnegie of a Zeiss microscope for the biological laboratory of the Jena University." A microscope, needless to say, arrived with Mr. Carnegie's compliments, at Jena with in a few weeks.
