What is Catarrh?

Catarrh is a mucous purulent discharge caused by the presence and development of the vegetable parasite amoeba in the internal lining membrane of the nose. This parasite is only developed under favorable circumstances, and these are: Morbid state of the blood, as the blighted corpuscle of tubercle, the germ poison of syphilis, mercury, torments, from the retention of the effete matter of the skin, suppressed perspiration, badly ventilated sleeping apartments, and other poisons that are germinated in the blood. These poisons keep the internal lining membrane of the nose in a constant state of irritation, ever ready for the seeds of these germs, which spread up the nostrils and down the fauces or back of the throat, causing ulceration of the throat up the eustachian tubes causing deafness, burrowing in the vocal cords, causing hoarseness; usurping the proper structure of the bronchial tubes, ending in pulmonary consumption and death.

Many attempts have been made to discover a cure for this distressing disease by the use of inhalations and other ingenious devices, but none of these treatments can do a particle of good until the parasites are either destroyed or removed from the mucous tissue.

Sometimes since a well known physician of forty years' standing, after much experience, succeeded in discovering the necessary combination of ingredients, which never fails in absolutely and permanently eradicating this horrible disease, whether standing for one year or for forty years. Those who may be suffering from the above disease should, without delay, communicate with the business manager of MESSRS. A. H. DIXON & SON, 303 King Street West, Toronto, and get full particulars and treatise free by enclosing stamp.—Mail (Canada).
