

# ***THE THIRST AND NAUSEA OF ANAESTHESIA***

are entirely prevented, and the shock of surgical operation greatly relieved by high rectal injections of

## ***Bovinine***

It should be administered with salt solution, heated to 70°F, an hour prior to operation, during same if shock is evident, and after returning patient to bed. The quantity of the injection must be suited to the individual case, varying from 2 ounces to 6 ounces of each. The salt solution renders the absorption of the ***Bovinine*** more rapid, and the heart action is immediately improved; the sustaining effect is continuous for two to three hours. The circulation which has become non-aerated through ether administration is oxygenated by the ***Bovinine***, and rapidly restored to normal condition. Hence the absence of nausea and emesis. A postal will bring you our scientific treatise on Hæmotherapy, with reports of numerous cases.
