These Fills, the result of long investigation and study, are officed to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drags themselves, but of the medicinal virtues only of vegetable remedies, extracted by chemical process, in a state of purity and combined together in such a mainter as to insure the best results. This system of composition for medicines has been found in the Cherry Pecteral and Pills both, the produce a more efficient remedy than had hitterto been oble tained by any process. The real-tions. While by the old mode o ery nedicine is burdened with m monious and interchees. While by the old mode of composition, cre-ery nodicine is burchance with more relies of adm-pionious and injurous qualities: by this, each indi-ridual virtue only that is desired for the curative effect is present. All the inert and choosions qual-tice of each substance comployed are left beinful, the curative virtues only being retained. Hence it is proved more purely roundial, and the Pille a surry, more powerful antiduce to discuss than any other medicene known to the world. THERE has long existed a public demand for an flective purgative, pill which could be relied on as use and perfectly safe in its operations. This has een prepared to meet that demand, and an estim-vo trial of its virtues has conclusively shown with has success it accouplishes the purpose designed. It is easy to make a physical pill, but not easy to nake the best of all pills — one which should have What success it accountlibles the purpose designed. It is easy to make a physical pull, but not cases to make the best or all pulls - one which should have none of the objections, but all the advantages, of every other. This has been attempted have, and with what success we would respectively submit to the public decision. It has been unfortunate for heading the second second second second second energy other.
