

THINGS WORTH KNOWING

If you are going to buy
A MANURE SPREADER

No machine within his reach is capable of doing so much for the farmer as the modern manure spreader.

But then it must be a machine with features—features of economy and efficiency.

The I. H. C. Manure Spreader has such features.

Any man of experience knows that a spreader only works perfectly when the load is level. The I. H. C. Spreader is the only spreader with a vibrating rake in front of the beater or cylinder which levels every load and any load of manure.

Any man knows that the apron operates better when power is applied at both sides.

The I. H. C. spreader apron is driven at both sides from both hind wheels.

This saves all torsion, binding, friction and undue strain, and consequently saves breakages and results in lighter draft.

One lever is better than many levers in operating any machine.

The I. H. C. spreader is the only spreader which is controlled and operated entirely with one lever.

It has ten different feeds—can be adjusted instantly while in motion to spread three to thirty loads per acre.

Large, solid, steel axles front and rear—front wheels cut under—turns very short.

Steel wheels—no rotting or drying out. Broad faced tires with turned in flange to keep out dirt, mud, etc. Lightest and strongest.

Provided with traction lugs on rear wheels—will work perfectly on hard, frozen or wet ground.

Made in various sizes to suit all requirements.

The I. H. C. spreader will distribute perfectly manure of all kinds—wet, dry, mixed, straw, full of stalks, frozen, caked, etc.

It may be equipped with special features known as lime and drill attachments for distributing broadcast, or in drills, fine manure, commercial fertilizers, lime, ashes, salt, cotton seed hulls, land plasters, etc.

Remember what we have told you—it is the manure spreader with special features which all make for success.

Call on the International Agent for information or write nearest branch house for catalog.

QUESTIONS AND ANSWERS. Veterinary.

LEUCORRHEA.

Mare discharges a cream-colored fluid from the vulva. I cannot get her to breed, though I have tried for two years.

F. A. B.

Ans.—She has a chronic disease of the womb, called leucorrhœa, which is very hard to treat, and she is not likely to conceive until the disease is checked. I would advise you to get your veterinarian to treat. If you decide to treat yourself, you must flush the womb out twice weekly with about one gallon of a two-per-cent solution of Zenoleum, heated to 100 degrees Fahr., and introduced with an injection pump or large syringe with a long nozzle. Give internally 30 drops carbolic acid, mixed with a cupful of water, and sprinkled on her grain twice daily. Continue treatment until discharge ceases, then breed her. V.

COWS WITH COUGH.

Some of my cows have a dry cough, and some of the young cattle in the same stable appear to have contracted the cough. They are in good condition and doing well.

A. W.

Ans.—The dry cough, without other constitutional disturbance, indicates tuberculosis. I would advise you to get your herd tested with tuberculin, and if any of them react, isolate them and deal with them as your veterinarian directs. If they do not react, you need not be alarmed about the cough. If the cough is caused by tubercular disease of the lungs, it is dangerous to keep them in the same stable with the healthy stock. There is little danger of contagion when the cattle are outside in the open air. V.

DIARRHŒA.

My cattle have diarrhœa. They are all affected. I am feeding cut cornstalks, unhusked, straw, clover and timothy hay, and about 12 lbs. grain, of 1-3 oats, balance wheat, peas and barley. I feed salt daily and sulphur twice weekly.

A. W. L.

Ans.—The diarrhœa is due to local causes, probably to the cornstalks. Examine all food carefully, and if any of it is of poor quality discontinue it. If you can find nothing wrong, discontinue feeding cornstalks and also discontinue giving sulphur. If any cases become serious give 2 ozs. tincture of opium, 4 drams catechu and 6 drams prepared chalk in a quart of cold water as a drench every four hours until diarrhœa ceases. Also add about 1/4 of its bulk of lime water to the drinking water. When the cause, which must be local, is removed, you will have no further trouble. V.

GOSSIP.

Messrs. John Dryden & Son, Brooklyn, Ont., write: "We are having numerous enquiries for Shorthorn bulls, and among those that have been sold recently are three to go to Alberta, and one, Lavender Spartan, a Cruickshank Lavender, by Prince Gloster, goes to Dr. S. W. Findlater, of Lacombe. Mr. Findlater is getting one of our good young bulls, and he should certainly develop into an extra sire, if breeding and individuality count. To Mr. S. D. Andrews, New Providence, Ia., another Lavender bull, by the same sire. This bull is going to head a high-class herd in the United States, and we look for good results from such cows as he will be among. We still have some extra good young bulls ready for service, and among them is a thirteen-months-old imported bull. This is a good, thick, short-legged calf, with a great coat of hair, and will make a block. He is sired by a son of Lovat Champion, and dam by a son of Count Arthur, the bull that was used in Mr. Duthie's herd for some time. We are always pleased to have men interested in Shorthorns visit our farm, and those desiring to purchase bulls will find that we are offering some good animals as well as having good breeding."

Rupture SURE CURE

No return of Rupture or further use for trusses. No Operation, Pain Danger, nor Time from Daily Work. Cures in every case. Read the following proof:

REV. SHERMAN

REV. E. D. SHERMAN, Harrow, Essex Co., Ont., writes: "Your Method has cured me of a dangerous Rupture at 67 years."
