

note: modems are not to be connected to Tempest PCs.

Technical characteristics for network modems will be provided at a later date with the file server specifications.

Tape Backup Units

Since COSICS II Unclassified will be composed of networked microcomputers the major backup capability will be confined to the file server. Technical characteristics for Tape Backup Units (TBU) will be provided at a later date with the file server specifications.

At the moment, external TBU must be ARCHIVE VP150E or compatible. A compatible unit will be acceptable as long as it uses the standard 3M DC600A cartridges.
