

open during day and night, unless a very high wind prevails which would bruise and blacken the leaf.

In 1911, the Dominion Government Experimental Station at Harrow, built a combination implement and tobacco shed 28 feet by 36 feet 18 foot posts, with 2 large roller doors on each end, corrugated steel roofing, galvanized top ventilators, and horizontal side and end ventilators, that is giving entire satisfaction. It has curing space for three acres of tobacco, not including the ground floor which is used for storing implements. For utilization of space and general efficiency in construction it will bear inspection.
