\$1,700,000,000 gold to \$2,360,000,000 gold, an increase of \$660,000, according to the anmual report of Director-General John Bar-

rett, of the Pan-American Union.

The total value of the trade exchanges between the United States and the other republics of this continent has grown in the same period from \$498,000,000 ta \$640,000,000, an increase of \$142,000,000.

These figures serve to give an idea of the commercial importance of the Latin-American republics.

Impressive as the figures are they represent only a fraction of what the trade of the Latin-American republics will become when all of them settle down to a tranguil, orderly and industrious existence and they begin to be developed in a really systematic manner and on a scale commensurate with their varied and inexhaustible resources.

ASBESTOS CAN BE FINE SPUN.

The earliest use of asbestos was for epinning and weaving, to make incombystible thread and yarn rope and cloth, and this has continued to be the most important use of asbestos ever since the days of the Greeks and Romans. Only the best grades can be used for this purpose, according to J. S. Diller of the United States Geological Survey. Thread can now be spun so line that it will run about 32,000 feet to the pound.

SIR WALTER'S GOOD FORTUNE.

A Reasonable Plea For the Stomach

If Your Stomach is Lacking in Digestive Power, Why Not Help the Stomach Do Its Work?

Especially When It Costs Nothing To Try Not with drugs, but with a reinientific analysis shows that digestion requires pepsin, nitrogenous ferments, and the secretion of hydrochloric acid. When your food fails to disest, it is proof positive that some of these agents are tacking in your digestive apparatus.

Stuart's Dyspepsia Tablets contain nothing but these natural elements necessary to digestion and when placed at work in the weak stomach and small intestines, supply what these organs heed. They stimulate the gastric glands and gradually bring the digestive organs back to their normal condition. Stuart's Dyspepsia Tablets have been subjected to critical chemical tests at home and abroad and are found to contain nothing but natural digestives.

Chemical Laboratory. Telegraphic address, "Diffindo," London. Telephone No. 11029 Central. 20 Cullum Street, Eggetter Laboratory. Fenchurch Street, E.C.

London, 9th Aug., 1905. I have analyzed most carefully a box of Stuart's Dyspepsia Tablets (which I bought myself at a city chemist's shop for the purpose), manufactured by the F. A. Stuart Co., 86 Clerkenwell Road, London, E.C., and have to report that I cannot find any trace of vegetable or mineral poisons. Know-ing the ingredients of the tablets, I am of opinion that they are admirably adaptable for the purpose for which they are intended.

(Signed)
John R. Brooke, F. I. C., F. C. S. There is no secret in the prepara-tion of Stuart's Dyspepsia Tæblets. Their composition is commonly known among physicians, as is shown by the recommendations of 40,000 licensed physicians in the United States and Canada. They are the most popular of all remedies for indigestion, dyspepsia, water brash, insomnia, loss of appetite, melancholia, constipation, dysentery and kindred diseases originating from improper dissolution and assimilation of foods, because they are thoroughly reliable and harmless to man or child.

Stuart's Dyspepsia Tablets are at once a safe and a powerful remedy, one grain of the active principle in these tablets being strong enough (by test) to digest 3,000 grains of steak, eggs and other foods. Stuart's Dyspepsia Tablets will digest your food for you when your stomach can't, Ask your druggist for a fifty contribution. Ask your druggist for a fifty cent box, or send to us direct for a free trial sample package and you will be surprised at the result. F. A. Stuart Co., 150 Stuart Bldg., Marshall. Mich.

No Weaknesses.

Dean Galbraith of S.P.S. was again called to the witness box and questioned regarding the floor of the pure water reservoir. He thought that the cracks in the floor indicated no special weaknesses. He thought the floor was quite strong enough. To keep the reservoir from rising he advocated the piling of sand on the roof.

Frederick Hening, formerly chief operator of the pumping station, was asked to point out where he thought the plant was defective. He stated that the boilers were not capable of doing the work required of them. He thought the bad smell at the pumping station would make the work there unbearable in the summer. He did not like Dean Galbraith's idea of putting an extra weight on the top of the reservoir, because he believed this would result in the floors cracking. The workshop, ht said, was too small.
