

THE VICTORIA SYRUP OF HYPOPHOSPHITES

EFFECTS OF THE TREATMENT.

1. Stimulates and increases the nervous energy to its maximum force.
2. Increases the quantity and improves the quality of the blood.
3. Strengthens the nutritive functions, thus maintaining those three conditions of robust health at their highest degree of intensity compatible with physical enjoyment.

PERSONS FOR WHOM ADAPTED.

Professional or Business Men, whose minds are actively occupied or concentrated on business during long hours, thus consuming brain force; or whose office confinement prevents a due amount of exercise or pure air.

Physicians, Students, Nurses, &c., who do not get the requisite amount of sleep or recreation.

Clergymen, Lecturers, Teachers, and those whose mental application or mental worry is of a long continuous character, causing weakening of nerve force.

Artizans, Labourers, Mariners, &c., whose occupation or exposure has a depressing effect on the vital powers.

Persons affected with Grief, or of a Fretting Disposition.

Women during Pregnancy, and after Confinement.

Those Convalescent from Disease.

Children of Unhealthy Parents.

Fragile Children.

Children of very Rapid Growth.

In fact, all persons of sedentary habits, or those who, either from excessive labour of body or brain, are called upon for a greater expenditure of nervous or vital force than is or can be supplied through the normal channels of recuperation.

Activity of every kind, and depression of whatever nature or degree, are followed by an undue waste of the phosphorus of the system, as is proved by an increase in the excretions of the "phosphates." If this waste is not arrested by rest, nutrition, and a re-supply of the element, nervous debility and an impoverishment of the blood are inevitable consequences, and both are marked characteristics of pulmonary disease.

SEXUAL EXCESSES are a most powerful cause of Consumption.

DEFECTIVE NUTRITION is an active cause of Nervous Debility and wasting of flesh, from the lessened power of the assimilative processes. Nervous Debility is an invariable prelude to Lung Diseases. Every organic disorder has at its point of departure a disturbance of the nutritive function.

HEREDITARY PREDISPOSITION forms no barrier to the action of the Hypophosphites.

How much better it is, then, to prevent the development of Consumption by simply taking care to keep the system supplied with a due amount of the Oxydizable Phosphorus than combat the disease after it has manifested itself by unmistakable physical signs. In this way alone we shall be able, by destroying the morbid condition from which it originates, to abolish the greatest evil that afflicts humanity.

The effect in all determinate cases is to cause a modification and gradual disappearance of all the general symptoms that characterize the disease, except those which pertain to local lesions; and even these yield, though more slowly, when they have not proceeded beyond a certain pathological condition.

Price \$1 00 per Bottle.
