

tempered spring steel, guaranteed to hold temper in hottest flues, and ground on the underside to give them a cutting edge. With the aid of a thumb-nut, as shown in cut, the knives can be drawn inwardly and outwardly. The knives when tool is shoved through flue will cut or shave off all incrustations down to the metal in a perfect and thorough manner. Their great flexibility and spring enable them to override any uneven structure in a flue, and they will come back immediately into position after passing it and continue on with their cutting. The various parts of the tool can be replaced being interchangeable and brass meets with iron in every part of the tool so as to prevent rust and corrosion. It can readily be seen that with a conscientious use of this tool there should be no dirty flues, and it must in consequence save money and time for its owner.

WIRE ROPE.

One of the most complete, interesting and instructive catalogues that we have had the pleasure of receiving in some time comes from the old firm of The B. Greening Wire Company, of Hamilton, Ont., which was established in 1859, and always well and favorably known throughout Canada. The year 1900 brings continued increase of business, as can be seen from the list of sixty-four special lines of screens, riddles, wire clothes, brushes, office fixtures and other goods also made by this company. The catalogue contains directions concerning the use and care of wire ropes, etc., lists of crucible cast steel pliable hoisting ropes, giving prices, sizes, strains, proper

goods, etc., wiring from $\frac{1}{4}$ to 2 $\frac{1}{2}$ -inch diameter, semi-pliable hoisting and running ropes, transmission and staunting ropes, best plough steel ropes in same sizes and for same special uses, Swedish charcoal iron ropes, also same variety of sizes.

They make special mention of the "Lang's lay" rope, a specially prepared style and sold at the price of ordinary wire rope.

Galvanized steel ropes also have attention, and ships' cables, teller ropes, sash cord, switch ropes, Greening's rope grave splices, etc., each have a place and a description.

Valuable tables showing relative effect of various sized sheaves or drums, on the life of wire ropes, clamps, thimbles, hooks, sheaves, wheels, splices and a very excellent treatise on use, etc., makes this catalogue a reliable reference book for factories of any kind to have in their offices.
