

Medical Report.

FOR YEAR ENDED SEPT. 30, 1893.

The Report of In-patients treated during the year is most satisfactory, showing an increase of 120 patients over the number treated during the previous year.

The private wards have been almost constantly occupied, many old school physicians availing themselves of the privilege of using them. The death rate per cent., 2.70, is exceedingly low. Of the deaths *one* was caused by Pernicious Anæmia, *two* by Heart Disease, *two* by Consumption, *one* by Tuberculosis of the bowels, *one* by Cirrhosis of the Liver, *one* by General Tuberculosis, *two* by Pneumonia and *one* by Hemorrhage of the Bowels during Typhoid Fever.

In the Maternity Wards, there were *five* infants still-born, and *two* died within a week of Congenital Syphilis. These are not counted in the death rate.
