

COMMON SENSE STILL TRIUMPHANT.

FISK'S COMMON SENSE SUSPENSER.

For ease, simplicity and durability, claims superiority over all cord and pulley or other braces, for these reasons: It requires no buttons on the pants, will not work off the shoulders, is easily and quickly adjusted, and when attached to the pants, as a *side support*, by placing the catches one or two inches each side of side seam of pants, it is impossible to get a strain on pants or shoulders when sitting or stooping. The cord is the same as same quality of web in other braces. The public are invited to try them, and buy if they like.

DO YOU WEAR A TRUSS ?

Take the Advice of Joshua of old.

"GIRD UP THY LOINS AND BE STRONG."

I manufacture a Truss unlike any other Truss made; that has more to it than a *simple pad*, with straps to hold it. A **real Truss** or Support, by which the entire *abdominal viscera* and loins are supported; with adjustable *air* pads that can be held in any position desired, never hurt, never get out of place, never slip over, are held with just as much pressure as needed. A Truss that can be worn night and day, never moves in any position of the body, supports the back, prevents Lumbago, Sciatica, Kidney complaints, is always comfortable, and easy.

It has been manufactured in Toronto the past eight years, is now worn by over five hundred in this city. Is approved and recommended by the best physicians in town, among others, Drs. Odwright, Kennedy, Richardson, Fisher, Moorehouse, Edgar, Stowe, Lang, Hall, Wright, &c., &c., and worn by Edward Lawson, (Victoria Tea House) Wm. Walker, John White, Mr. Delaporte, Frank Nalton, David Lindsay, with over three hundred others in this city, from whom I have testimonials, and to whom I am permitted to refer. All our Trusses are made to order from measurement, are warranted to fit and do their duty. In case of a young person with a recent rupture, no trouble with it after a short time. And to a person wearing my support instead of a belt, I will guarantee they never can be ruptured.

I have recently had occasion to require an appliance of once effectual and delicate in the character of the pressure exerted. I have found Mr. Fiske's altogether the most ingenious and completely successful that has come under my observation, for the treatment of hernia.
