

## CHANGES AT REPUBLIC MINE.

MANAGER HARVEY AND SUPERINTENDENT  
BRESNAHAN RETIRE.

(From the Republic Miner)

James P. Harvey who has from the first held the post of local manager of the Republic mine handed in his resignation some time ago owing to the change in ownership and the large personal interests needing his attention. The new company asked him to remain for the time being which he has done.

His place will be taken by Major R. G. Edwards Leckie, who has for some time been one of the experts in the employ of Mr. McCuaig of Montreal and those associated with him. Major Leckie arrived yesterday afternoon and it is presumed he will take charge immediately.

The men at the mine and mill as well as the people of Republic generally while extending a warm greeting to Major Leckie who is an able mining man and a most agreeable gentleman personally, will regret to see Mr. Harvey sever his connection with a mine he has helped to make famous the world over.

Mr. Harvey will remain manager of the Lone Pine-Surprise group, Trade Dollar and other Clark properties and will give attention to the Harvest and other properties in the South Half in which he is interested.

Brick Bresnahan will resign the superintendency of the Republic mine and Mr. Kane will probably resign the charge of the Republic mill. Neither will leave the camp. Mr. Bresnahan has large private interests here and in British Columbia, and he will give some attention to these. It is not known who will take the places of Messrs. Kane and Bresnahan.

## MINING NOTES.

The Granite and Banner Gold Mining Company, are installing a 5 stamp mill on their property at Camp McKinney, and by latest advices the work of setting up the mill is progressing satisfactorily.

The owners of the Fontenoy claim in Camp McKinney are hampered in the development of the property, owing to the non-arrival of the hoisting plant. The shaft is down a depth at which only a steam hoisting plant can be work to advantage, therefore it is to be hoped the difficulty will soon be overcome by the arrival of the machinery.

A portion of the hoisting plant ordered several months ago arrived at the Waterloo claim in Camp McKinney on Wednesday last. As soon as the balance is brought in from Penticton the plant will be put in position, and the main working shaft will be sunk another 100 feet.

## CRIPPLE CREEK NEWS.

## FAVORITE HAS RICH SHUTE.

The Favorite mine, on Bull hill, is once more the scene of a big strike. What appears to be an entirely new shute, carrying high values, has been opened in the bottom level, and will likely be found to continue clear to the surface.

Only a small force has been employed at the mine for the past few months, and it has been working until the last few days on a long cross-cut being driven at a depth of 180 feet, to prospect for the big lead known to traverse the ground. The mineral has not yet been encountered, and work on the cross-cut continues.

This week Manager Young put some men at work in the south drift of the fifth level at a depth of 426 feet. No ore has been till now mined in this level, for the principal reason apparently that insufficient work had been done in it.

Yesterday an ore body was entered, and it is said there is disclosed three feet of ore, a sample from which gave returns of \$73.40 to the ton. The character of the mineral is entirely different from anything before found in the property. It is a brown phonolite, streaked with what looks like a carbonate. Subsequent investigation has shown that 16 inches of the mineral only carries values of \$3 and \$4, which would give the remaining 20 inches a much greater worth. This 20 inches is streaked with the black stuff, and if pounded up, plenty of free gold is discernible.

The find has been made in the company's workings, and with the exception of ore that was encountered on the first level, it is the first time mineral has been found to the south of the shaft. The vein found this week is ten degrees east of south, whereas that found above was ten degrees west of south, which would go to show that it has changed its course, or that it is an entirely new one. The Favorite will once more enter the lists of shippers.

## TEMOMJ ANNUAL MEETING.

The annual meeting of the stockholders of the Temomj Gold Mining Company was held in the Alamo Hotel to-day. Out of a capitalization of 1,000,000 shares about 900,000 shares were represented. The reports showed the properties of the company to be in good condition. The company has no debt, and there is a surplus of \$3,000 in the treasury. The following officers and directors were elected: President J. F. Thompson, vice-president, H. F. Vaughn; secretary, John L. Thompson; treasurer, F. E. Wilson; assistant secretary, J. H. Kratzer. The other member of the board is E. W. Cox.

The air compressor has been ordered for the Mabel M., on Beacon hill, and as soon as installed sinking will be resumed on the property. At present the shaft is down 252 feet. A 100-foot lift is to be sunk. The mine is still producing heavily, there being now out six carloads of mineral good for \$25 to the ton. Some high-grade ore is carefully sacked before shipping, and returns better than twenty ounces to the ton. There are three shifts employed at the mine.

## MORNING GLORY.

After the many vicissitudes of the May Queen Company, operating the Morning Glory of the Work Company, it would appear that it now has plain sailing ahead, with the probability that it will be reimbursed for the heavy outlay on the property, and make handsome profits on its investment.

In the bottom level of the mine, at a depth of 300 feet, the leasing company is drifting on twenty-four inches of ore, which is unquestionable the continuation of the Jack Pot vein, and which carries values as high as four and five ounces to the ton.

The find has been followed for several days, and gives every indication of permanency. A shipment is being prepared and will go out next week.

## EL PASO.

Two cars of high grade ore were shipped from the El Paso mine, located on Beacon hill, yesterday. The first car will run \$1,000 to the ton, while the second car will average \$100 a ton. It is believed the shipment will yield \$15,000. The ore is from the 220-foot level running south from the company's workings and at a point 125 feet from the shaft.

## THE ISABELLA MINE.

The Cripple Creek Times says:

The Isabella has not yet cut in the tenth level the rich shoot opened in the ninth, and from what is thought to be a good source 200 feet or more will have to be driven before the level will be under it. This statement is not official for no information can be had from the manager, but it has been tolerably well-verified by the writer. It appears that from the shaft a cross-cut was run out to the Buena Vista vein from shaft at the tenth level, where it was found to be twenty eight feet wide and no assay was had upon it that ran under \$8, and from that up to as high as \$200. The vein was making considerable water, and owing to the lack of boilers and pumps on top it was thought best not to run on it, so a bulkhead was put in and a level extended alongside of the vein for 900 feet, where another cross-cut was made and good ore was again found. Of course it is not supposed, however, that the shoot is continuous for that distance. Now a cross-cut is going out to get under the rich ore found in the ninth level, and if it proves to be as good as it was above a sensational advance in the price of Isabella shares may be expected.

## LARGE OUTPUT.

(From Colorado Springs Gazette July 2, 1899.)

The past week has been productive of many interesting happenings in the mining world and has witnessed one of the richest strikes of the season. Of prime interest are the figures on the June production from the Cripple Creek district. They were awaited with a good deal of interest, all being anxious to note what effect the smeltermen's strike would have upon the output from the great gold camp. In spite of the labor troubles and the closing down of the smelters, the June output is very
