

UN General Assembly Special Session

13. We discussed the progress that has been made since the 1992 Rio Earth Summit in defining and promoting sustainable development, and we commit ourselves to taking action in areas critical to advancing this agenda. Sustainable development demands the full integration of environment, economic and social policies; should be based upon democratic governance and respect for human rights; and should have poverty eradication as one of its ultimate objectives. In this connection, we reaffirm the vital contribution of civil society. We urge the United Nations General Assembly, at its Special Session to be held next week, to reaffirm and give impetus to the Rio commitments, to take stock of implementation since Rio, and, most importantly, to develop a manageable list of priority issues to address in future work on sustainable development.

Climate Change

14. Overwhelming scientific evidence links the build-up of greenhouse gasses in the atmosphere to changes in the global climate system. If current trends continue into the next century, unacceptable impacts on human health and the global environment are likely. Reversing these trends will require a sustained global effort over several decades, with the involvement of all our citizens, and changes in our patterns of consumption and production.
15. We are determined to take the lead and show seriousness of purpose in strengthening international efforts to confront climate change. Our ultimate goal must be to stabilize atmospheric concentrations of greenhouse gasses at an acceptable level. This will require efficient and cost-effective policies and measures sufficient to lead to a significant reduction in emissions.
16. International cooperation will be essential. At the Third Conference of Parties to the UN Framework Convention on Climate Change in Kyoto we must forge a strong agreement that is consistent with the Berlin Mandate and that contains quantified and legally-binding emission targets. We intend to commit to meaningful, realistic and equitable targets that will result in reductions of greenhouse gas emissions by 2010. The agreement must ensure transparency and accountability and allow Participants flexibility in the manner in which they meet their targets.
17. Action by developed countries alone will not be sufficient to meet this goal. Developing countries must also take measurable steps, recognizing that their obligations will increase as their economies grow. We agree to work in partnership with them to that effect by implementing technological development and diffusion and supporting environmental education and capacity building.
18. We stress the importance of setting up an appropriate mechanism for monitoring and ensuring compliance among Parties. We also agree to work together to enhance international efforts to further develop global systems for monitoring climate change and other environmental trends.
