Raps Scheme To Snapshot Mars

Harvard Professor Brands Plan of American Scientist as Absurd.

Cambridge, Mass., Sept. 8.—Plans of B. McAfee, an American scientist in

London, in collaboration with Professor David Todd for taking photographs of Mars as if the planet were little more than a mile and a half away through a mine shaft in Chile as a giant telescope barrel, are "impracticable and offer no possibility of success," in the opinion of Professor Solon I. Bailey, director of the Harvard observatory.

"It is true that stars can be seen in daylight from the bottom of a mine or a well, just as we can see them through a telescope even in a thunderstorm," Professor Bailey said, "but the idea of using a mine shaft in conjunction with a big dish of mercury to make Mars appear a mile or two away is preposterous. I have no faith in the idea. It is a foolish, wild scheme."

Little For Today. Why do they call the day we don't work Labor Day? All salads should be thoroughly chilled.

Breakers Ahead For Disarmament Plan

Forthcoming Conference Not Viewed Optimistically by Many—Success Hoped For.

Washington, Sept. 8.—Not all is optimism with respect to the forthcoming disarmament conference. It is true that most of the official outlay and the comment seen in print assumes the conference will be a success and result in a definite and satisfactory agreement for the reduction of armaments, or, at least, of naval armaments.

But under the surface, talk is of a decidedly different nature. Everybody is hoping, of course, that the conference will succeed and will result in such a start in the reduction of armaments as to mean lighter tax burdens for the world. Americans have been fond of thinking of themselves as lightly taxed in comparison with other peoples, but they have abandoned that sort of impression. Thinking men are saying that the tax burdens of the United States are getting to be intolerable and cannot continue and that expenses—especially those of navy and army—must be reduced so as to lighten this load. No doubt if entertained that statement of other enlightened countries take the same view as to their own national tax problem.

But granting all this, there is under the surface much doubt and misgiving about the success of the disarmament conference. The obstacles in the way of success are formidable. In the first place, there is doubt as to how far the Pacific complications with Japan can be adjusted. A part of the Japanese people are anxious to settle them, but there is the military element to be taken into account. How far its influence will prevent an agreement, no one can tell, but it is recognized here as an obstacle.

French insistence that if she disarms on the land side, the other countries must agree to protect her eastern border, will block any agreement with this country, and probably mean failure of movement to induce armistice. The senate will not satisfy any such agreement any more than it would ratify Article 10.

It is assumed here that Great Britain, though anxious for reduction of naval burdens, will still insist that this to be so effected as to insure British naval supremacy. This is taken to be the meaning of the recent statement attributed to Lord George that Great Britain would go on building. While it is recognized here that Great Britain by reason of her position could hardly be expected to abandon her naval supremacy, on the other hand when it comes to this country entering into an agreement which recognizes such supremacy, there arises the very practical question whether the senate will approve it. Obviously such an agreement would be under fire from many elements in the United States the instant it was announced.

On the whole, therefore, it is a good deal to talk about disarmament and reduction of armaments than to formulate a program which will get anywhere.

If the Anglo-Japanese alliance were thrown overboard, there is no doubt it would contribute to the possibilities of success of the conference. Feeling is here that the influence of Canada and Australia, as well as other dominions, will be highly useful in this respect. If this were effected and the United States would yield a certain degree of naval preponderance to Great Britain by reason of her geographical and maritime situation—something which some able men here advocate—the road to disarmament, or, large reduction of armaments, would be comparatively easy.

Here is the thing which farseeing men are asking and they think the question may overawe the conference into doing something worth while. It is: "What will happen if the disarmament conference fails? Will the United States then in spite of itself be driven headlong toward another war, presumably in the Pacific? Another war is too terrible to contemplate. It might mean the wreck of western civilization. After all, the fear of this untoward thing, suspended like the sword of Damocles, over the conference, will be the most potent force working toward an understanding."

Easy To Catch. That Gotham girl says a maiden's aim nowadays seems to be to throw herself at a man.

REFLECTIONS OF A BACHELOR GIRL

By HELEN ROWLAND

The man who fondly fancies that he "understands women," goes through life with one foot in the quicksands and the other on a banana peel.

Heigho! Every time you discover a new amusement, somebody labels it "sin" and turns it into an irresistible temptation.

So imperishable is the spirit of Adam, that even while a man is standing before the stove stirring his home-brew, he will calmly argue that a woman "drove him to it."

It takes almost as much Christian faith to leave a good-looking husband around town all summer as it does to leave a good-looking umbrella in the church vestibule.

This is an age of chronic gamblers! Crossing the street, calling a friend on the telephone, getting married, making home-brew, and keeping your evening gown on your shoulders are all made exciting games of chance.

A woman's beauty may be gauged half-way between what her husband thinks she looks like, before breakfast, and what she fancies she looks like in the mirror after dinner.

The easiest way to make a slow horse fast is to feed him just a little less than he wants; and the easiest way to keep a man devoted is to give him just a little less than he asks.

Youths regard the ladder of fame as a shining stairway with velvet-covered rungs; but those at the top know that it is a greased pole, with a gross-agent at the foot, boasting and shouting, and many a hard drop back to earth.

The dapper thanks heaven that nobody has thought to increase the high cost of spooning, by putting a quarter-meter on the moon.

Alas! Infatuation, like paralysis, is often all on one side!

FINANCE MINISTER AT INSURANCE MEET

Sir Henry Drayton Says Corporations Like Sun Life Asset to Country.

PROVEN DURING WAR

Company Subscribed No Less Than Thirty-Eight Million Dollars to Government War Funds.

(Montreal Gazette.)

That large operations like the Sun Life of Canada represented a tremendous asset to the country, is the opinion of Sir Henry Drayton, Minister of Finance, according to statements made by him at the annual gathering of the agency staff of the Sun Life Assurance Company of Canada, which concluded its sessions over the week-end at Bigwin Inn, Ontario. In the course of an interesting address, Sir Henry said he found himself addressing an assembly of men, who probably were, by the very nature of their calling, more widely and fully representative of the people than any gathering, he said, ever spoken to. He spoke with all the sincerity that accrued from being an old policyholder in the Sun Life. He laid stress on the fact that large corporations like the Sun Life represented a tremendous asset to the country, a fact which was amply proven when, under the stress of war, the people were called upon to place huge sums of money at the disposal of the Government. The Sun Life alone, in those days of emergency, found themselves able to subscribe no less a sum than thirty-eight million dollars in government funds.

Constitutes a Bulwark. He pointed out that in his opinion the issuing of ten policies, each for \$1,000, was a more valuable thing for the country at large, than a single policy for \$10,000. The large number of small policies issued exerted a stabilizing influence.

The large and beneficent work being done by the life assurance companies in welding the whole of the workers of the country into one economic whole, could not be overestimated, and was bound in time to constitute itself a bulwark against political trouble and disruption.

Mr. T. B. Macaulay traced the rise and progress of the Sun Life Company, rejoiced the loyalty of the staff, and commended his hearers to the high standards of honor and fair dealing which the company had followed the war, the company had this year distinctly improved upon its position during the previous twelve months. The company's assets had during the past year reached \$125,000,000, while the amount of insurance in force now totalled over \$800,000,000. The swing of the pendulum had carried us into adverse times, but his opinion and the best financial and industrial opinion in the country inclined to the view that we had turned the corner, and that we were within measurable distance of a period of high prosperity. No company on the continent found itself better equipped to take advantage of these altering conditions than did the Sun Life.

Mr. J. B. Mabon, assistant actuary of Montreal, dealt with under-average lives. Mr. Mabon explained with the utmost clearness the scientific basis adopted by modern actuaries for fixing the various ratio of risk. He pointed out that enormous strides had been made in extending insurance to all classes of the population, and to practically meet every risk and contingency of life. In his opinion the development of scientific assurance had yet a long way to go.

Mr. G. E. Harris, of Montreal, the supervisor of the Company's Field Service Board, gave an illuminative address, dealing with the value of institutional education among men representing great life insurance companies.

Over three hundred representatives of the company attended the sessions, including not only the principal officers of the company, but representatives drawn from practically every part of North America.

YOUR FALL COAT

should be selected from our complete and correct stock, which includes all the new materials in the very latest styles.

The Style

The styles shown in our new stocks are the very newest and most correct, there being models for every sort of wear.

The Quality

Only the very best materials are shown in our Fall Coats and the workmanship is perfect in every detail.

The Price

Our entire stock of Fall Coats is marked at most moderate prices, so that you get the best value possible.

True To Our Trust. For many of us necessarily the first thing in life is, and forever must be, to be faithful to our unwritten compact with the young souls whose breath was given for the common cause; for the highest conception of national purpose and human ideals that it was in them to believe. Even the economic salvation of the mass of men would be worked out more straightly and surely, if the living, generally, could contrive to be a little truer to the dead.—Sunday Observer (London).

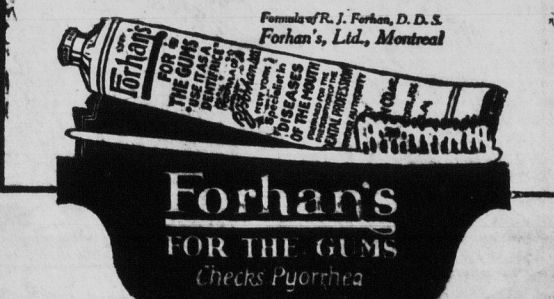

Tender Gums—A Warning

Beware of gum tenderness that warns of Pyorrhea. Four out of five people over forty have Pyorrhea—many under forty, also. Loosening teeth indicate Pyorrhea. Bleeding gums, too. Remember—these inflamed, bleeding gums act as so many doorways for disease germs to enter the system—inflicting the joints or tonsils—or causing other ailments.

Forhan's positively prevents Pyorrhea, if used in time and used consistently. As it hardens the gums the teeth become firmer.

Brush your teeth with Forhan's. It cleans the teeth scientifically—keeps them white and clean.

If gum shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment. 35c and 60c tubes in Canada and U.S. If your druggist cannot supply you, send price to us direct and we will mail tube postpaid.

Forhan's FOR THE GUMS Checks Pyorrhea
