

THEODOLITES.

Best 5 inch Theodolite, divided on silver to 1 minute, with complete tangent screw movements, and spring verniers..... \$130 00

Improved do., Fig. 1, built extra strong for use in this Province, with large parallel plates and tripod with brass cap. Microscope to vertical arc 2 microscopes attached to and moving concentric with horizontal vernier plate, direct eye-piece inverting do. with revolving colored glasses, diagonal eye-piece and dark glass cap, silver reflector, &c., well packed in French polished mahogany case screwed together..... 150 00

do. do. having Compass with 4 $\frac{1}{4}$ inch needle..... 155 00

Magnetic observations can be taken with the above instrument with much greater accuracy than with Theodolites of the usual pattern; and it is so designed that it is no less efficient for any other description of work, and neither is it more bulky.

Best 6 inch Theodolite divided to 20 seconds, on silver.. 170 00

6 inch Transit Theodolite, do. do. 170 00

6 inch Transit Theodolite, Fig. 2, with four microscopes moving concentric with the verniers, and with improved attachments. Hollow axis with apparatus for illuminating cross wires at night, lamp and stand to attach to standards inverting, direct and diagonal eye-pieces with colored glasses, extra strong tripod, table stand, &c., the whole beautifully finished and strongly packed in polished case..... 200 00

NOTE.—In this instrument, the telescope which is very efficient, will reverse both ends with the short eye-piece on and the axis bearing the telescope will reverse end for end in the Y's of the standards; the level on telescope is extremely sensitive and large, and a striding level is also supplied.
