

dealer agrees to consign for a term of years to the Dairymen's League for sale all the milk produced upon the farms controlled by the milk producer, except such milk as is required for home, farm or local consumption, and during the term stated, and thereafter for six-month periods, unless 30 days' notice is given in writing by either party before the expiration of any contract period. Furthermore, the milk producer agrees to deliver the milk, pure and unadulterated, in condition for sale suitable in New York or adjacent markets, to the shipping station, condensary or such other manufacturing plants as is designated by the Dairymen's League, or if the Dairymen's League should be unable to dispose of the milk during any portion of said period, the milk producer shall be so notified, and in such an emergency it shall be optional with the milk producer, whether they manufacture their milk at home or at a place provided and operated by the local branch.

The Dairymen's League agrees to sell and dispose of said milk to the best advantage and to remit the proceeds thereof to the milk producers, less the commission.

It is further agreed that the Dairymen's League shall receive a commission from the proceeds of the sale, of one cent for each one hundred pounds of milk sold during the time of the contract, this to be deducted from the proceeds of sale.

It is mutually agreed that in case either party fails in the performance of the contract, that the party so failing shall and will pay to the other the sum of five dollars (\$5.00) per cow for the number of cows which the milk producer has taken stock, which sum is fixed and agreed upon as the liquidated damage for such failure, and that the same shall in no event be considered a penalty.

#### Agreement With Dealers.

A contract is also made between the Dairymen's League, Incorporated, as agent of the milk producers, and the dealer. This is to the effect that the League agrees to sell and deliver at the place agreed upon, and the dealer agrees to take and pay for as provided, each day during the period covered by the contract, all the milk produced by those members of the Dairymen's League from whom the dealer has been in the habit of receiving milk, if not previously sold, and such additional quantity of milk as is required by the dealer. It is understood that all milk sold under this agreement shall be of good quality and must pass inspection and approval of the authorities of the State of New York and the municipality covered by the dealer.

#### A Sanitary Privy

THIS cesspool is an abomination if situated near the well or in such a position that the well may be contaminated from it. The average outhouse on the farm is still worse. Where there is difficulty in the matter of ultimate disposal without the use of a cesspool, and the consequent and apparently unavoidable risk thereby incurred of contaminating the water, it would be better to use an earth closet. This is not wholly satisfactory, but is safer and far better than the provision so often found on farms and in villages. The house containing it should be well built and substantial, well lighted and ven-

tilated, with a good roof, and preferably plastered on the inside to insure less exposure in cold weather. A

carefully-made and dry walk, screened by lattice for protection from the wind and for privacy, should be built to it.

The excreta should be received in a galvanized-iron pail, not too large, and made to fit close under the seat. This water-closet. Each time the closet is used, dry earth is added. The pail should be emptied very frequently. With proper attention, this closet need not be, and should not be, built far from the house. It would even be possible to place it in a room built against the house, the room having one door opening from the house and another opening out of door. This would make it possible to enter from the house in inclement weather, and also to carry out the pail without pass-

ing through the house. The room should be well ventilated by a window close to the ceiling, and only tissue paper should be used. (See fig. for arrangement of pail, seat, and dry-earth box.)

The earth for use in these places is to be found in nearly every field and garden, and should be of rather a loamy nature if possible, and porous. A very sandy soil is next to useless. Large heaps of earth should be collected for the year's use and dried in the summer sun. It is not necessary to use perfectly dry earth, but it is always the best.

Don't worry about what the other fellow says of your farming methods. It is results in the fall that count.

#### Pleased With Farm and Dairy

PLEASE find enclosed \$2 for reward in Farm and Dairy for three years. I could not afford to be without it. Go on with your good work. I enjoy the good common sense of Farm and Dairy and particularly appreciated Mr. Halbert's address published recently.—Walter McLennan.

One of the great weaknesses of the small farm is that too large a proportion of the capital is buried unproductively in buildings and machinery. —A. Leitch, O. A. C., Guelph, Ont.

The "Ideal" Lock

## "Ideal" Fence Prices

### Freight Paid to Your Station

Below we give the freight-paid prices to any station in Old Ontario (except electric) on only a few of the many styles of "Ideal" Fence.
