VOTE FOR UNION WITH THE SWISS

Berne, Switzerland, May 13.—As a result of a plebiscite held Sunday in Vorarlberg, the western most district of Austria-Hungary, on the question of uniting with Switzerland, 45,500 persons voted in favor of annexation as compared with 11,000 against such a union.

Overtures to Switzerland will now begin, but the Swiss States themselves are to have a plebiscite on the question of taking in the Croyn land.

The British Ministry of Munitions, through its training schools, has shown how successful women may be prepared for shop supervisors and forewomen.

RECIPE TO CLEAR A PIMPLY SKIN

Pimples are Impurities Seeking an Outlet Through Skin Pores

Pimples, sores and boils usually result from toxins, poisons and impurities which are generated in the bowels and then absorbed into the blood through the very ducts which should absorb only nourishment to sustain the body.

It is the function of the kidneys to filter impurities from the blood and cast them out in the form of urine but in many instances the bowels create more toxins and impurities than the kidneys can eliminate, then the blood uses the skin pores as the next best means of getting rid of these impurities which often break out all over the skin in the form of pimples.

The surest way to clear the skin of these eruptions, says a noted authority, is to get from any pharmacy about four ounces of Jad Salts and take a tablespoonful in a glass of hot water each morning before breakfast for one week. This will prevent the formation of toxins in the bowels. It also stimulates the kidneys to normal activity, thus coaxing them to filter the blood of impurities and clearing the skin of pimples.

Jad Salts is inexpensive, harmless and is made from the acid of grapes and lemon juice, combined with lithia. Here you have a pleasant effervescent drink which usually makes pimples disappear; cleanses the blood and is excellent for the kidneys as well.

GOOD GAS WELL STRUCK

Chatham, May 13.—The Union Gas Co. has struck a good gas well in Dover Township, which is producing nearly a million cubic feet a day. It was struck at a depth of 2,060 feet during drilling for oil. The well will be sent down a couple of hundred feet more in search for oil.

Miss Bertha Ellis, of Toronto, is in the city visiting her sister and brother for a few days.

TRADE UNCERTAIN

Brantford, May 13.—Col. Harry Cockshutt and George K. Wedlake have returned here after an extensive trip abroad in the interests of the Cockshutt Plow Company. Col. Cockshutt stated today that the trade situation was uncertain, although there was good promise of material improvement in the not far distant time, due most largely to the uncertainty in the European situation.

DEMOCRAS GAIN IN PORTUGAL

London, May 13.—The Democrats made gains in the elections held on Sunday in Portugal, according to a wireless despatch from Lisbon. The Social Revolutionists were in the minority.

A graduate nurse has begun action to recover \$150,000 damages from an "Elmira man" for alleged breach of promise.

The continuous rain buffed a particularly mean trick on Buffalo by putting 2,000 telephones out of commission.

The American envoys find that they cannot enter Irish town where martial law has been proclaimed.

SAGE TEA KEEPS YOUR HAIR DARK

When Mixed With Sulphur it Brings Back its Beautiful Lustre at Once.

Gray hair, however handsome, denotes advancing age. We all know the advantages of a youthful appearance. Your hair is your charm. It makes or mars your face. When it fades, turns gray and looks streaked, just a few applications of Sage Tea and Sulphur enhances its appearance a hundred-fold.

Don't stay gray! Look young! Either prepare the recipe at home or get from any drug store a bottle of "Wyeth's Sage and Sulphur Compound," which is merely the old-time recipe improved by the addition of other ingredients. Thousands of folks recommend this ready-to-use preparation, because it darkens the hair beautifully, besides, no one can possibly tell, as it darkens so naturally and evenly. You moisten a sponge or soft brush with it, drawing this through the hair, taking one small strand at a time. By morning the gray hair disappears; after another application or two, its natural color is restored and it becomes thick, glossy and lustrous, and you appear years younger.

CONDITIONING HORSES

Must Start Four to Six Weeks Before Spring Work Begins.

Time Now to Build Hotbeds—How to Construct It, Ventilation and Watering Most Difficult Problems. Injure Early Vegetables.

(Contributed by Ontario Department of Agriculture, Toronto.)

THE experienced farmer knows the importance of having his horses in the best possible condition to stand the strenuous work of spring. Upon his horse power depends, in no small degree, his success in getting his seed sown early in a well-prepared seed bed in the proper tith to bring best possible returns, for early seeding and a deep, fine seed-bed mean more bushels in the granary in the fall.

The actual practice of conditioning for spring work should commence from four to six weeks before the land is likely to be ready for the plough or cultivator. All changes in feeding should be made gradually. Straw in the roughage ration should gradually be replaced by hay until finally nothing but good quality hay is being fed. Careful feeders generally save their best hay for the spring work. The horse that has been getting little or no grain must not be immediately put on a full ration. Commence with a small feed, say half a gallon of rolled oats or, at most, twice per day and gradually increase this as spring draws near until the horse is approaching full feed. While the horse is still idle the percentage of roughage fed to the whole ration may be continued large. That is, a full feed of concentrates is not necessary until work begins but something approaching a full feed should be reached just before seeding opens. Once hard work has begun the grain or concentrate ration must be gradually increased and the roughage proportionately decreased. The more severe the labor the smaller the proportion of roughage and the larger the proportion of concentrates should be fed. From eight to fourteen pounds of oats per day, according to weight of animal, should be enough for the average farm horse just before seeding starts and something in the neighborhood of one pound to one and one-half pounds of roughage per 100 pounds of the animal's weight should be fair feeding. Regular cleaning is important as it aids shedding and improves the coat of the animal. As the feed is increased so should the exercise increase.

Farm teams should be hitched July during the "conditioning" period that their muscles become hardened and that their shoulders gain the power of resistance to prevent galls and sore later on. Preparation for the spring work should be a fleshing and hardening process, and it cannot be accomplished without good feeding, grooming and regular light work in harness. When heavy work begins, gradually increase the grain feed up to from ten to eighteen pounds daily according to the weight of the horse, and the hay to such an extent that the animal is getting a total ration of grain and roughage of from two to three pounds per hundred pounds of horse, this depending on condition and amount of work done. Always give plenty of pure water, mostly before feeding grain if possible.—Prof. Wade Toole, O. A. College, Guelph, Ont.

Starting Early Plants.
Growers desire to have vegetables as early as possible, and for this reason it is necessary to start plants like cabbage, cauliflower and beets in hotbeds. Others like tomatoes and peppers have too long a season of growth to ripen a sufficient amount of the crop to make it pay. This method gives us from four to six weeks start.

Hot beds should be on the south side of a fence or building. Obtain good fresh manure, turn twice to get fermentation well started. Put it in a pile about eighteen inches to two feet in height, and a foot larger each way than the frame, being careful to tramp it thoroughly. To do this put it up in layers of six inches. Then cut on the frame, which should be eighteen inches at the back and twelve inches at the front, facing south. Put in four to six inches of soil and put on the glass. Air every day for the first four days to get rid of the gases generated by the fermentation. The soil is then raked and made ready for seed sowing.

The seed is generally sown in rows three inches apart, about 10 seeds to the inch. When the seedlings are showing the first true leaf they are transplanted to other beds, the plants being set two inches apart each way. With cabbage, cauliflower, beets and etuce, this one transplanting is all that is necessary. Tomatoes, egg plants, pepper and such plants require two transplantings, the last one four inches apart each way, or into our inch clay pots or quart berry baskets.

Ventilation and watering are the two most difficult problems in hot-bed management. Ventilation should be given whenever possible. Even on stormy days the sash should be lifted even if it is only the thickness of a ath that is placed under it. Many growers use a piece of lath three inches long. This gives them three different distances of ventilation, and it may be laid on the glass when not in use, and will be always ready. Always have the opening away from the wind. You should also ventilate after watering to prevent scalding.

Water carefully, only give what the plant requires, especially in the early season, and only in bright days, in the morning. The plants must be dried off by night. As the plants grow the watering will, of necessity, be oftener, but care and thought should be used at all times.—A. H. MacLennan, Vegetable Specialist.

The Hiawatha Indians at Rice Lake present each returned veteran, with ten acres of land in the community.

The Red, White and Green Package is Familiar to All

FOR over twelve years the original Red, White and Green corn flake package has been a familiar combination of colors to all Canadians.

During all these years millions of Canadians have enjoyed
