

singular, roller-shaped object, presumably of aboriginal workmanship, which I find in the McCulloch collection, is shown in Fig. 79. The ends have evidently been cut off while the stone was rotating. Another curious object (Fig. 78) is in the Fairbanks collection. One face thereof is slightly hollowed, while the other is correspondingly convex. The wider end has been partially cut away so as to leave a short neck. I shall not venture an opinion as to the use of these two relics. An oval boulder (Fig. 77), very regular in shape, is in the same collection. Not the slightest importance, however, can be attached to it, for it is merely a natural form bearing no marks of man's workmanship.

EXPLANATION OF PLATES I. TO III.

Scale: Figs. 1-16, 96-98, two-sevenths natural size; Figs. 17-95, one-seventh natural size.
