

WAMPOLE'S

HÆMOSTATIN

THIS is the trade name of a styptic and astringent which we recently introduced and which preserves and exhibits all of the remarkable properties of the active crystallized constituent of the Suprarenal Gland.

We claim superiority for both the POWDER and SOLUTION. For the POWDER, because it is the only product of the Suprarenal Gland at present being marketed which is absolutely pure, as may be determined by an examination under the microscope which will show perfectly formed and distinct crystals, while other products by a similar test are shown to be grossly contaminated with small particles of fats, dust and phosphates. For the SOLUTION we claim superiority, because it is the only one devoid of any properties that will cause irritation when applied to the eye.

We unhesitatingly recommend it to be of the greatest value as a styptic—an application of the solution 1 : 1000 immediately stops the bleeding after minor surgical operations on the rectum, bladder, vagina, uterus, urethra, nose and eye—after operations around the anus (hemorrhoids and fistulæ) after the opening of abscesses, for the bleeding following the extraction of teeth, etc., etc.

Hæmostatin has, in addition to its styptic action, a decidedly stimulating effect on the heart, but as this feature of it is not as yet fully understood by the medical profession, we do not suggest its indiscriminate use in this connection.
