26. *Dictyosiphon fœniculaceus*, Grev. Pictou, *MacKay*. This species has been found growing as regular branches from a stem formed of the filiform frond of *Chordaria flagelliformis*, at Pictou, in such a manner that the whole appeared to be but one plant. The conundrum was—how can the microscopic section of the branch show the structure of *Dictyosiphon*, while that of the stem shows with equal distinctness the structure of *Chordaria*? Further examination, of course, demonstrated the character of the interesting union. Frye's Island, Grand Manan, Miscou, *Hay*; Kouchibouguac Bay, *Fowler*.
