## FARM AND DAIRY

(13) 685

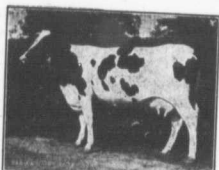

Another of 38 "Grace Fayne's"

Dairy readers to note especially the three individual heifers, pictures of which we took and reproduce here. These are but a sample of 38 females now in the Haley Bros. herds, these 38 all being from the great "Grace Fayne" bull.

Our readers will be interested to know that before the Haley Bros. were in for pure bred they had kept grade Holsteins. They had graded their Holsteins up to a high state of production. They always had used pure bred sires. Their success has thus been reared on solid foundation.

At the Guelph Winter Fair, now for a number of years, the Haley Bros. have really done wonders. They first started into the Guelph Winter Fair Dairy Test six years ago, showing but one individual, a two-year-old heifer, the capturing first in her class with six or eight points to the good.

"Me Too" Grand Cham, Toronto, 1912

The year following (1909) they again went to Guelph, taking Lady Aaggie De Kol and Lanthe Jewel Meechblide 3rd, Lady Aaggie again being the champion and the other cow getting second place. Queen Butter Baroness (heifer under 30 months) was also along and proved then her worth of what she has since accomplished. She was first in her class. In the three days she gave 159.69 lbs. milk testing 4.3 per cent in butter fat, gaining a total of 217.76 points, this being 36 points ahead of the cow next to her.

Encouraged by this great record of success at actual production the Haley Bros. went to Guelph again the following year stronger than ever, taking eight head along. One of these was the sensational Calamity Starlight Butter Girl, the three-year-old that tested 5.5 per cent in butter

Silo and Partial View of Barns at M. L. Haley's Farm

another 4.3 per cent butter fat. And so these records have been piled up one year on top of another, and then another. There never were before exhibitors that had so little experience as had the Haley Bros. that have won so much. They were fortunate in laying their foundations good and strong in the beginning and afterwards building on good cattle that were good testers. Herein is the pointer for others to be careful to do likewise.

It is most interesting and encouraging to talk with the Haley Bros. and hear them tell about some of their earlier experiences. While each of them has his own individual herd and keeps his own females they have gone in together in buying and have used the same bulls. When they got the great "Grace Fayne" bull they felt that they really could not afford him. He has, however, paid them well. They have always acted on the principle of getting the best females they could afford; then buying the very best of males "regardless."

Of late since developing and producing such remarkably good stock in their own herds they have gone out and bought back again to their own herds sires, which they have raised and sold. One of these is Butter Baron (picture reproduced with this article), recently gotten back after his dam, Queen Butter Baroness, made her exceptionally big record of 33.177 lbs. butter in 7 days, her milk testing 4.93 per cent. The Haley Bros. claim that this bull is the only one in Canada that averages over 30 lbs. butter for dam and sire's dam—both Canadian-bred—both raised and developed by owners! Another bull which they have bought back is Homewood Aaggie Mercena, two years old, a beautiful, smooth, strong-hearted individual (shown with this article). He is being used on the "Grace Fayne" heifers. As we were taking down this information one of the Haley boys remarked, "We have found that we could not do much better than buy our own stuff back again, at least in these two particular cases. We know what they are and what their stock has done, and our action in getting them back seemed wiser to us than to go over to the other side and pay big money for something we might not know anything about." This latter bull is out of the great Lady Aaggie De Kol, and is sired by Prince Abbekerk Mercena. With a string of dams and great dams on both sides of their breeding, knowing them to have good udders and knowing

them to be great producers, surely with a string of ancestors as good as these two bulls have—"They'll do!"

The greatest individual in the herd is perhaps the "Grace Fayne" bull, shown at the lower right hand corner of these two pages, Grace Fayne 2nd from this bull that won the grand championship at Toronto the last two years and at Ottawa last year as well as at some important fairs out in British Columbia. This bull, as you will see from his photograph, is of great substance, long, open and deep. All of his heifers carry his great characteristics of depth and low-setness. In his pedigree you will find individuals of the deepest purple in the Holstein blood. Colantha 4th's Johanna (shown with this article) is his grand-dam with his sire's side; the 40-lb. cow, Johanna De Kol Van Beers, is a half sister to him! His dam, Grace Fayne 2nd, cut of which you see below, made 26.3 lbs. butter in 7 days and 107.32 lbs. butter in 30 days. She was the first cow to give 100 lbs. milk in one day. She is the dam of Grace Fayne 2nd Homestead, 35.55 lbs. in 7 days, and Grace Fayne 2nd Girl, 30.25 lbs. in 7 days. She has over 32 A. R. O. sisters. The sire of this great "Grace Fayne" bull is Colantha Johanna, Colantha 4th's Johanna—35.22 lbs. butter in 7 days, 134.83 lbs. butter in one year; milk in one year, 27,482.50 lbs. Several of the sisters of this greatest bull in the Haley Bros.' herd have made world records as two and three-year-olds in yearly work.

You may see from the picture of this bull that he is great stuff. These are bulls (and Haley Bros. have them) that will beat him in the show ring. As you see he is not as showy behind as some individuals. He is nevertheless great stuff, of wonderful quality, and he has a great head and front; moreover his stock is A1, and it is doing great work. His heifer calves all have great udders. Even the

A Great Canadian-Bred Holstein from High Testing Stock

This bull as shown in the picture is not in show condition, he having been in the Ford, Ont. The blood back of him has proven itself most superior as producers of great quantities of very rich milk, almost invariably going over 4% in butter fat. He is the Canadian Champion aged cow and with a butter fat test in her milk 4.5%. You can see he is an excellent individual and would show to advantage were he fitted.—Photo by an editor of Farm and Dairy.

The next year they took to Guelph, what has since developed to be the famous Lady Aaggie De Kol, she taking everything before her while capturing first prize and sweepstakes. They also took along a grade cow and another pure-bred, Queen Butter Baroness, the cow which recently rolled up the great official record of 33.177 lbs. butter in 7 days; milk, 538.3 lbs. testing 4.93 per cent in butter fat, was Canadian champion in aged cows.

fat and captured the championship awards,—64 points ahead of nearest competitor. There is no mistaking in their cattle the Haley Bros. have in their cattle the blood, which produces cattle giving milk high in per cent of butter fat. The entire eight in the exhibit this time averaged quite a bit in their milk (4.13 per cent to be exact); and the year before the cattle were well over four per cent, one of them testing 4.6, another 4.3 and still

A Shew Bull Offered New For Sale  
Develop Johanna Lad, here shown, is not owned by the Haley Bros. this year because not showing. He's your opportunity!Dam of the Great "Grace Fayne" Bull
