The celebrated Prof. Tyndall has written a letter to the London Times written a letter to the London Times in which he reports that Dr. Koch, of Berlin, has discovered that the disease phthisis, commonly called consumption is caused by a parasite. The Professor says:—

On the 24th of March, 1882, an address of very serious public import was was delivered by Dr. Koch before the physiological Society of Boston. It touches a question in which we are all at present interested—that of experimental physiology—and I may, therefore, be permitted to give some account of it in the Times. The address

rounding tissue. It was, he says, in WHEAT FROM INDIA.—We have often MANHOOD the highest degree impressive to ob- predicted that the wheat growers of serve in the centre tubercle cell the minute organism which had created it. Transferring directly by inoculation the tuberculous matter from deceased ani mals to healthy ones, he, in every instance rappositived the disease. To instance, reproduced the disease. To meet the objection that it was not the parasite itself, but some virus in which it was imbedded in the diseased organ that was the real contagion, he cultivated his bacilli artificially for long periods of time and through many successive generations. With a speck of matter, for example, from a tuberculous human lung, he infected a substance, prepared, after much trial, by himself, with a view of affording nutriment to the parasite. Here he permitted it to grow and multiply. From instance, reproduced the disease. To freak of destiny if the opening of the cesses.

ment to the parasite. Here he permitted it to grow and multiply. From this new generation he took a minute sumple, and infected therewith fresh nutritive matter, thus producing another brood. Generation after generation of bacilli were developed in this way without the intervention of discase. At the end of the process, which sometimes embraced successive cultivations extending over half a year, the purified bacilli were introduced into the circulation of healthy animals of various kinds. In every case uncoulation was followed by the reproduction and spread of the parasite and the generation of the original disease.
