

Under "Notes on the Blossoming of Fruit Trees in Canada" will be found data of scientific and economic value, covering the blossoming period of the leading fruits in widely separated portions of the Dominion. By referring to these records the orchardist may so arrange his fruit trees as to bring together those varieties blossoming at or about the same time, in order to encourage thorough fertilization of the blossoms.

The results of cultural experiments with raspberries, strawberries and blackberries are detailed, and valuable deductions drawn therefrom.

Under "Spraying Experiments" the value of this practice is emphasized by the results obtained in treating plant diseases particularly injurious to orchard and garden crops. Extensive varietal tests are described in connection with vegetable and tobacco experiments. The report is sent without charge to farmers, fruit growers and others who express a desire to receive it.
