necessary to include in the cash reserves of the Canadian banks the amount of money they have "at Call" and "Short Notice." Leaving out one half the sums they have available in Canada, if we take only the money our banks have at call and short notice in New York, and include this in their cash reserve, English fashion, we get this result, the 35 Canadian banks have cash reserves amounting on an average to 26 per cent. of their gross liabilities. This, however, does not represent the actual strength of their cash reserves, for, when an emergency arose they would have their securities in reserve, amounting to \$58,000,000, which, added to other reserves, raises the proportion of gross reserves to liabilities to over 40 per cent. These percentage comparisons, though interesting and suggestive, instructive also to those who can read statistics with some degree of insight into their inner meaning, which is often quite hidden to those who skim their surface, are more theoretic than They are based upon the assumption that all the banks in Canada may simultaneously be subjected to a sudden "run," or demand for the redemption of their liabilities, especially note issues and de-This contingency is so far outside the region posits. of probability as not to call for consideration. the sky falls we should catch larks," says the proverb, but meanwhile the business of the world proceeds on the assumption that the sky will not fall.

The critic who condemns the banks for their small reserves of gold has entirely overlooked the currency usages of Canada, which do not call for gold. proprietor of one of the largest retail stores in this city informs us, that there is not \$20 in gold tendered at his counters in the course of a year. The critic assumes also, that a demand for gold will be simultaneously made on all the banks, which, practically is A "run" for gold would be an extraimpossible. ordinary novelty in Canada. There have been "runs" here during which the excited creditors of the bank so attacked had their demands satisfied by the notes of the same bank! In other "runs" most of the money paid out by the bank under pressure was deposited with other bankers, who handed it back to their neighbour to enable him to meet the "run," so to their neighbour to enable him to meet the "run," so the "run" was a perfect circus, the money going round in a circle, the creditors being satisfied, and the It is significant that bank not seriously weakened. the six strongest and most ably managed banks in Canada have gold reserves in proportion to circulation and deposits lower than the average.

It seems to us reasonable to give the bank managers of Canada credit for ordinary common sense, as well as knowledge of their business, in both of which they are assumed to be deplorably deficient when they are charged with holding inadequate gold reserves.

A New Bacillus has been discovered that generates gases during its growth. The "Insurance Observer" says: "It lives on sugar and converts the residuum into alcohol, and, secondly, into carbonic acid gas." A sort of self-acting distillery germ, apparently. Now, can its operations be stopped by a prohibitory law?
