IMPROVED

OBLIQUE INGUINAL TRUSSES. HERBERT respectfully informs Medical Gentle-tures and has now on hand IMPROVED OBLIQUE IN-GUINAL TRUSSES, according to the construction of T. P. Teals, E.gr., F. L. S., Surgeon to the Leeds General Informary, and which are so highly spoken of in the Medi-cal Gazette, February 1, 1850. For the information of those who cannot refer to the above work, it may be ata-tical than Transcounts of the analysis of the state ied, that these Tra-sers consist of "an elastic steel girdle, a pad of varying form, according to kind of hernia, and a spiral apring acting directly on the pad; elements which, existing in various trusses heretofore known, are here combined in the construction of one." The "mode of attachment between the spiral and the pad renders any other fr tening unnecessary. An uniform pressure throughout the whole extent of the pad is thus obtained; and the spiral, acting as a universal joint, allows the girdle to adapt itself arying movements of the body

given in an advertisement; but it may be stated that they have been shown to several of the most distinguished Medical Practitioners of this City, who have expressed their unqualined approval of them.
