

# ROSSLAND WEEKLY MINER.

Two Dollars a Year.

ROSSLAND, B. C., THURSDAY, OCTOBER 27, 1893.

Fourth Year, Number 33

## THE BULLION GROUP

It Will Be Equipped With a Compressor Plant.

OWNED BY ALF COMPANY

The Property Lies Close to Ymir—It Has Been Developed by 325 Feet of Shafting Besides Several Hundred Feet of Open Cuts.

The Bullion group, on Quartz creek near Ymir, is to be equipped with complete machinery early next spring. The property is owned by the Alf Gold Mining company, which also owns the Alf in the South Belt. The corporation held its annual meeting yesterday afternoon in its offices with Abbott & Hart-McHarg in the Goodvee block. The most important business transacted was in regard to the machinery for the Bullion.

One of them was made by Jonathan Bourne, jr., and wife, of Portland, Ore., conveying to the Mountain Lion Mining company an individual two-thirds interest in the Mountain Lion quartz mining claim, situate at Republic. This deed was made in consideration of the sum of \$100,000, and bore a revenue stamp of \$100. The other deed was executed by W. H. and Emma Brown, husband and wife, conveying an individual interest in the same company for the sum of \$50,000. It bore a \$50 revenue stamp. These are two of the largest mining deals made in this vicinity for some time.

R. E. Curry has purchased a half interest in the Pedro claims, which ends against the Golden Harvest. E. A. Donney, the locator, is associated with him. Both the Golden Harvest and Banker Hill leads run into this property. Work will soon commence. Phil Brewer has been working on the Copper Belle, which lies west of old town. In sinking he encountered considerable quartz, and will continue sinking. The Iron Monito claim, adjoining the Princess Maud, has a tunnel in 130 feet. In running the tunnel two different veins were cut, one eight feet and the other three. No drifting has been done on either vein, as they were running for the main ledge, which is 25 feet wide. They expect to cut it about 75 feet farther. Surface assays went as high as \$40. Forty assays were made on the surface. Arrangements are now in progress to drive the tunnel ahead by contract.

Work is progressing on the Anabonds, which is situated one mile from town and half a mile from the Republic. The vein was only 10 inches on the surface, but is widening rapidly, with numerous stringers coming in. Assays are very favorable. The Wallisford Group. W. C. Archer arrived here Monday from Toronto. Mr. Archer, while in Toronto, succeeded in forming a company and enlisting the capital for the development of the Wallisford group, which is on the divide between Record and Sophie mountains. The group consists of three claims, the Wallisford, Minnie Moore and Summit. The property has been developed by two shafts, one 40 and the other 14 feet, and a tunnel of 140 feet. The ore carries copper, gold and silver. It is understood by Mr. Archer's friends that he is returning for the purpose of immediately turning over the management of the group, unassuming operations of the new company that has been formed. Mr. Archer deserves a great deal of credit for his perseverance with this group, as he has stuck to it through discouraging circumstances, and his property has a good showing and should soon develop into shippers.

Progress at the Salmo Consolidated. The latest reports from the mine at Salmo are of the kind the management likes to receive, and go to show that no time is being lost, the maximum development being obtained at the minimum cost. The winter's supplies are all at the mine and the open ditch has been interrupted work will now be in order right through the winter months. Work is now being centered in deepening the No. 2 shaft to the 200-foot level, and to expedite matters the management will shortly materially increase the force. The appearance in both shaft and drift continues to amply satisfy those immediately concerned.

The Arlington's Plant. The new machinery on the Arlington, on the north fork of the Salmon river, near Erie, is in place and sinking has been resumed. The plant includes a 30-horse power boiler, a hoist and a pump. The shaft, which is of the incline variety, is down about 100 feet, and the showing continues very satisfactory. The ledge is of quartz, carried between slate walls. The property is in excellent shape for the winter, and about eight men are to be employed continuously.

A Divorce Suit. The first application for divorce that has been filed with Registrar Schofield since he assumed the duties of his office in Rossland was issued Tuesday. The complainant was William Trevor, a restaurant keeper of Trail. He is suing for divorce from his wife, Lillian Trevor. Statutory grounds are named, and James Keith, a Trail merchant, is named as the co-respondent. Besides asking for divorce, Mr. Trevor has also brought action against Keith for \$10,000 damages.

The case of Robert Neill, charged with stealing \$240 from a man named Isaacs at the International on Sunday night, was partly heard before Magistrate Jordan yesterday and was continued until today. Neill, who is a man with a family, claims an alibi.

## THE REPUBLIC CAMP.

Report of the Progress Being Made on Promising Properties.

REPUBLIC, Wash., Oct. 25.—[Special.]—Another strike was recently made in the Treasury claim, owned by Henry Kauffman and others. The tunnel, which is now in 280 feet, has been more or less in good quartz and the values are said to be high. The ore is of the same honey-combed character that carries such high values in the Republic. The ledge runs parallel with the Republic. Mining men have maintained that there are three great parallel ledges running through the district, and the find goes far to prove that their theory is correct. Development in this new strike will be watched with interest.

The Golden Harvest tunnel is being continued along the vein. Recent assays run as follows: From hanging wall side \$28.10; foot wall side \$18.80. The tunnel is now in 270 feet.

The Ben Hur tunnel is in 300 feet. The entire face is in quartz. Arrangements are being made to erect all suitable buildings for the mine. Two mining deeds were recently filed with the auditor which carried \$150 worth of documentary revenue stamps. One of them was made by Jonathan Bourne, jr., and wife, of Portland, Ore., conveying to the Mountain Lion Mining company an individual two-thirds interest in the Mountain Lion quartz mining claim, situate at Republic. This deed was made in consideration of the sum of \$100,000, and bore a revenue stamp of \$100. The other deed was executed by W. H. and Emma Brown, husband and wife, conveying an individual interest in the same company for the sum of \$50,000. It bore a \$50 revenue stamp. These are two of the largest mining deals made in this vicinity for some time.

R. E. Curry has purchased a half interest in the Pedro claims, which ends against the Golden Harvest. E. A. Donney, the locator, is associated with him. Both the Golden Harvest and Banker Hill leads run into this property. Work will soon commence. Phil Brewer has been working on the Copper Belle, which lies west of old town. In sinking he encountered considerable quartz, and will continue sinking. The Iron Monito claim, adjoining the Princess Maud, has a tunnel in 130 feet. In running the tunnel two different veins were cut, one eight feet and the other three. No drifting has been done on either vein, as they were running for the main ledge, which is 25 feet wide. They expect to cut it about 75 feet farther. Surface assays went as high as \$40. Forty assays were made on the surface. Arrangements are now in progress to drive the tunnel ahead by contract.

Work is progressing on the Anabonds, which is situated one mile from town and half a mile from the Republic. The vein was only 10 inches on the surface, but is widening rapidly, with numerous stringers coming in. Assays are very favorable. The Wallisford Group. W. C. Archer arrived here Monday from Toronto. Mr. Archer, while in Toronto, succeeded in forming a company and enlisting the capital for the development of the Wallisford group, which is on the divide between Record and Sophie mountains. The group consists of three claims, the Wallisford, Minnie Moore and Summit. The property has been developed by two shafts, one 40 and the other 14 feet, and a tunnel of 140 feet. The ore carries copper, gold and silver. It is understood by Mr. Archer's friends that he is returning for the purpose of immediately turning over the management of the group, unassuming operations of the new company that has been formed. Mr. Archer deserves a great deal of credit for his perseverance with this group, as he has stuck to it through discouraging circumstances, and his property has a good showing and should soon develop into shippers.

## THE REPUBLIC CAMP.

How the Quartz Mill is Supplied With Water.

REPUBLIC, Wash., Oct. 25.—[Special.]—Granite creek, having a water shed of perhaps 25 square miles, is the source from which the Republic mill derived its water for power purposes. In a country of so low an elevation as the water shed in question the precipitation is so great as in the higher and rougher country to the north. Towards the end of the prolonged draught of this summer the waters of Granite creek fell a trifle below the mill requirement. An intendent Harvey, to guard against such a contingency, had earlier in the season located water rights on a chain of three lakes discharging into Granite creek about three miles above the mill. These lakes are naturally impounding reservoirs, and with the work now completed on them, serve well as a reserve water supply.

The Republic company put in on the lower end of the middle and larger lakes a wooden dam 180 feet long and about 18 feet high above the solid formation. A strong head-gate was put in by which the flow of water, whatever the stage, could be regulated to augment the flow in Granite creek, when the creek itself is too low to supply the demand. From the sill of the gate an open ditch has been excavated on a slight grade of carry the water into the smaller and more northern lake, from the foot of which the ditch has been continued northward across the gulch tributary to discharge into the gulch tributary to Granite creek. The total length of the ditch is about 3,200 feet. The area of the middle lake at low water is about two and three-quarter acres; it is raised to deep, and when the water is raised to the crest of the dam, it gives an area of 15 acres, with a depth of 33 feet, an increase of about eight times the low water capacity, giving nearly 5,000,000 cubic feet. The long marsh at the lower end of the dam, catching and holding like a great sponge, much of the water not otherwise intercepted.

The level of the lakes is about ten feet higher than the highest point of the Republic claim, or about 170 feet above the wheel house at the mill. Nearly 470 feet of this elevation is lost, however, before the waters reach the intake of the flume which discharges into the pressure tank 250 feet above the water wheel. The dam is of the ordinary crib design with carefully driven sheet piling along its face, which is given a slight convex curve toward the upper lake. The toes are well puddled, and as tight a dam as that of kind of design permits.

The flume, 20 inches deep by 30 inches wide, is laid on a grade of one and one-half inches per 100 feet, and by reason of its design, which is something of an innovation in flume construction, while being as cheap in cost as the usual design, will withstand 100 per cent more lateral thrust than the usual design, a duty flume often have to perform during the spring and fall, when intermittent thawing and fall, when intermittent thawing

and freezing pulls down earth and boulders. This simple, inexpensive and efficient water works system insures to the Republic mill, it would seem, a continuous and assured supply the year round. John C. Ralston was the engineer in charge. A fire, a few minutes after 6 o'clock this morning, destroyed the home of the Goussau brothers. One of the brothers had a wife and three children, and had left for the mine a few minutes before the fire broke out. The mother rescued all the children, but the baby was badly burned. Nothing was saved as the house burned like tow. The loss was about \$500. The house had just been fixed up for the winter.

## MINING NOTES.

Dabney & Parker sold a block of 15,000 Fairmonts during the week. Harry Daniel has sold to J. P. Paxton a one-fifth interest in the Cliff No. 1, on Red mountain, adjoining the Cliff. Hon. C. H. Mackintosh has secured an option on the Bullion, the Wake-Up and the Mat, adjoining the Washington.

The British America corporation has secured certificates of improvements for the Tootsie and the Whoop-up, on Sophie mountain. The recent purchasers of the Yellowstone group, in proximity to the Salmon, Consolidated, are working a 500-foot tunnel. They are working three shifts. The New York-Kootenay Mining company has been granted certificates of improvements for the Jumbo No. 3 and the Jumbo No. 3 fraction, on Deer Park mountain, near the Silica reduction works.

J. H. Berry has secured an option on the One Eye, on the south side of Murphy creek, from Samuel Simpson. The option is for \$25,000, and payments are to be divided over a period of time extending until May next. Sinking and drifting are both in progress on the Gopher. The fault in the Gopher has been passed through. It proved to be of no great extent. Some two feet of ore has been met. It shows satisfactory copper values.

In the No. 1 shaft is down 200 feet, and a station is being out prepared to crosscutting for the No. 1 shaft. The No. 2 shaft, which is in about 225 feet, the ledge continues about five or six feet wide, and the ore shows excellent copper values. A new tunnel has been started on the Columbia-Kootenay ground. It will be known as Tunnel No. 6, and lies 150 feet below the No. 5. The tunnel is adapted to getting depth with tunnels, and at the upper end of the Columbia-Kootenay ground the new tunnel will have nearly 800 feet of back.

At the recent meeting of the Fairmont Mining syndicate it was decided to put up an engine and boiler, at present on the ground. As the operations in the shaft are impeded by water it was decided to purchase and install a steam pump, which will keep the shaft clear of water. J. L. Parker, the engineer of the company, was instructed to purchase such a pump.

A number of the principal stockholders of the Golden Gate company, owning the Mountain Chief mine on Dog creek, near the present site of the Republic, are anxious to make an effect from the mine area to the effect that its condition has greatly improved lately. The party included Mayor Wallace, J. S. Clute, D. B. Bogle, Clayton Miller, M. B., and Mike Burns.

## FAIRMONT IS EXCITED.

There Has Been No Disturbance of the Public Peace So Far. PARIS, Oct. 26.—Although there is evidence of suppressed excitement on all sides here, there has been no disturbance of public order up to the present time. The police and municipal guards are in strong force, and they will not permit the crowds to assume dangerous strength, but the situation was eagerly discussed by excited groups in the streets.

President Faure, this morning, received Senator Loubois, president of the chamber of deputies. It is the intention of M. Faure to form a cabinet as rapidly as possible, and the names of M. Ribot and M. Freycinet are the most prominently mentioned in connection with the president. M. Faure consulted with M. Leygues, vice-president of the chamber of deputies, who advised the president to form a concentration cabinet, to include among its members M. Ribot and M. Dupuy as the principal ministers. In Dupuy as the president of the chamber of deputies today the deputies of all shades of opinion expressed the conviction that M. Delcasse should remain at the head of the foreign office in order to assure continuity of the Fashoda negotiations.

## THEY WANT PROHIBITION.

Sunday School Ontarians Say They Won't Be Coerced. PETERBORO, Ont., Oct. 26.—The following resolution will come up this afternoon for consideration at the Ontario Sunday School association convention: "This convention composed of Sabbath school workers of all denominations throughout Ontario, while knowing that the province of Quebec gave a very large majority against prohibition and a sanction of the liquor traffic and hereby demands that the government shall place on the statute books a law prohibiting the manufacture, importation or sale of intoxicating liquors, however, given notice of their intention to oppose it."

The Tweed Shooting Scrape. TWED, Oct. 26.—Frank Hardy, the man at Peterboro charged with being one of the assassins of R. S. Perry here last Saturday, was yesterday committed for trial. Perry identified him as the man who was struggling with him when he shot him. Perry's wounds are doing well, and all the dangerous symptoms have disappeared.

## IN OUTSIDE CAMPS

Work on the Arlington May Soon Be Resumed.

## STRIKE ON THE CAPELLA

Ore That Goes Over 3,000 Ounces to the Ton—The Sailor at Camp McKinney Bonded For \$5,000—Other Properties Bonded—Etc.

The news from the other divisions this week is more than usually of an encouraging character. Valuable properties here and there are getting into the hands of those who are able to develop them, showing that the Kootenays are coming more and more into favor as a place of investment. Appended is the weekly review:

## SLOGAN DIVISION.

The Wakefield Mines will ship probably 75 carloads of ore this winter. Work on the Fisher Maiden on Four-Mile, was resumed last week. Preparations are being made for an early shipment.

Twelve inches of clean galena ore have been encountered on the 16 to 1, situated on the south fork of Kaslo creek. The Condon group, lately bonded by the North-west syndicate, is showing up well with work. The property is being surveyed.

The Bosun is making regular shipments of 20 tons. The property is developing satisfactorily in every sense, and more men are being added to the working force. Sixty tons have been shipped so far this month and this will be increased to 120 tons for the month.

A big strike has been made lately on the Isis, in the Lucky Jim neighborhood near Bear lake, consisting of three feet of clean galena. The strike was made by Fletcher, Gus Butcher, Bob Williams and the Black Bros. own the Isis group. The Blue Bird, lately purchased by Messrs. McDonald and Corbin, is showing up well with development. Stopping was commenced last week. Some excellent samples of ore are being shown in New Denver, says the Ledger, from the Marion, Eclipse, Mowich and other Silver mountain properties where the late strikes were made. The Isis is being steadily pushed on all the late finds, and the properties are developing in an excellent manner.

The trouble in the management of the Arlington on Springer creek, promises to be settled soon and work resumed on the great property. The \$14,000 mortgage held on the property by Ross Thompson is to be raised and the management put on a peaceful footing again. In stripping the upper vein on the Silgo fraction, one of the claims in the Capella group on Goat mountain, about a mile up from the New Denver siding, A. Thompson ran into a nine-inch streak of fine decomposed sulphide ore showing shades of blue and green and bonated copper. A small handful was taken out and handed to Mr. McNaught of Silverton, for assay, who sent up the reply: "The fine stuff you sent up went 4,400 ounces of silver; former assays have given 300, 315, 1,400 and 3,100 ounces."

## NELSON DIVISION.

The Dunas is situated at the head of Wild Horse creek and is owned by Eugene Crotsen. The tunnel is in 150 feet. In crosscutting a vein of highly mineralized ore 10 feet wide was encountered. It is almost entirely a gold proposition, the majority being concentrated ore. The assays in gold went \$30 to \$40 to the ton and also fair values in silver and lead. A small green ore Frank Crow has taken a contract to continue the sinking of the shaft on the Hidden Treasure on Jubilee mountain. This mine adjoins the Jubilee on the mountain. The best properties at the bottom of the shaft are situated at 110 feet and are valued at \$41.20 and \$13.80 in silver. Work will be continued all winter. This property is owned by Messrs. Grantham, Grobe and Hull.

The Evening Star is situated on Bear creek, a little northeast of the Dundee mine. The contract for shaft sinking is progressing favorably. The shaft is now down 40 feet and a two-foot ledge carrying zinc and galena has been discovered. The Evening Star is owned by the Fairmont Gold Mining company, limited.

On the Bullion group of three claims, a mile and a half up Quartz creek, development work is progressing rapidly. A number of ledges run across the claims, each of which has been uncovered at different points. In the 115-foot shaft two feet of clay and talc has been struck, which indicates that it is a fissured and runs from \$15 to \$25 per ton. Two shifts of men are now at work. John Bergman, who is associated with John Lindblade and John Turner in the claim on his way to Nelson. He says that they have just completed a 200-foot crosscut tunnel and tapped the ledge at a depth of 180 feet.

The Dow mineral claim owned by Mrs. Collins of the Ross house is situated about half a mile from Ymir on Wild Horse creek. There has now been sufficient development work done to apply for a crown grant. A strike was made last Saturday of some fine looking ore about 11 feet in the tunnel. Recent assays gave about \$22 in gold.

## BOUNDARY AND YALE.

A good strike has been made on the Pheasant claim, which is situated in Greenwood camp, and owned by Messrs. W. B. Rickards of Midway, and A. K. Stuart of Greenwood. The ore, the extent of which has not yet been determined, is a pyrrhotite carrying copper and gold. The Sailor, a Camp McKinney property, has been bonded to George R.

## Naden, R. M. McEntire, Thomas McDonnell, N. Leplante and the British America Development Company.

The Sailor was owned by Charles Diz. It is a free milling proposition. The property is crown granted. Assays running from \$18 to \$300 to the ton have been secured from the ledge. The Cariboo ledge is supposed to run through the property. The price mentioned in the bond is \$15,000. Ten per cent has been paid in cash, \$3,000 is to be paid in three months, and the balance in six months.

Mr. Haas, E. M., who is superintending the work being done on the Cordick in Summit camp by the Adams British Columbia company, reports that in sinking through the fault in the bottom of the shaft a body of pyritic ore (mostly iron pyrites) has been struck, which assays over \$14 in gold. This is a high gold value for Summit camp.

Boundary Creek district can very properly claim the biggest copper mine in the world, says the Boundary Creek Times. The Knob Hill of Greenwood camp, contains a larger body of pay copper per acre than any other known mine. A tunnel has been run a distance of 340 feet at right angles to the vein. Every foot of the tunnel is in pay ore, and the wall of the ledge has not yet been reached. Experienced mining men who examined the property have been astonished at the immensity of the ore body. Work on the tunnel is being continued and it will not be stopped until the limit of the ore body is reached. The face of the tunnel is about 150 feet from the surface.

A group of claims on the North Fork of Kettle river has been bonded to a syndicate, represented by Mr. Shaw of London, for \$44,000. The properties included in the group consists of the Golden Eagle, owned by C. M. Tobiasen; the Alaska, owned by McCallum and Larson; Mammoth and Junction City, owned by Dave Evans and Sam Rose of this city and J. B. Sargent of Spokane. Tobiasen gets \$35,000, Evans, Rose and Sargent \$3,000, and McCallum and Larson \$1,000—15 per cent of which has been paid. Twelve men will be put to work next week. Operations will be continued all winter under the management of J. H. Fox.

## EAST KOOTENAY.

The Prospector says it is the intention of the Alberta & East Kootenay Development company, which owns the Cariboo mine at Morley, to put in a winter camp this fall, for the purpose of further developing its resources. The property is rich in native copper. The Sitting Bull and Mary J. have been bonded to a Nelson syndicate for the sum of \$40,000. A large number of men are now engaged in developing the property. The character of the ore is a clean high grade galena carrying gray copper. Assays have run as high as 742 ounces in silver to the ton.

Active work is now being carried on at the head of Six-Mile creek on the Paris Exhibition group, recently acquired by Victoria capitalists. Supplies for the winter have been laid in, and a tunnel will be run to tap a large body of ore which is supposed to exist in the camp. The North Star mine is one of the greatest silver-lead properties on the continent. Some thousands of tons of ore has already been shipped from this mine, but though it is located within 20 miles of Fort Steele, the cost of transportation has been so great as to discourage the active working of the mine. At present a force of some 35 men is at work making new developments so as to be in readiness for shipping on the extensive scale as soon as the branch road is completed.

## REVELSTOCK AND TROUT LAKE.

Charles Ross is kept busy packing supplies to the Beatrice, Nettie L., Silver Cup and Ethel properties, which will be busily getting out ore in the Trout Lake district this winter. The development work which E. M. Morgan and Andy Ward have just completed on the Cashier, a claim a short distance from Trout Lake City on Trout creek, has shown up an exceedingly strong vein carrying quantities of galena ore of a good grade.

## PERSONAL.

M. R. Galusha is at the Windsor. H. G. Oliver of Halifax, is at the Allan. C. B. Fraser of Pictou, N. S., is at the Allan. R. T. Lowry of the New Denver Ledger, is in town. Mr. and Mrs. William Glynn of New Denver, are at the Allan. Hon. T. Mayne Daly is back from a trip to Halcyon Hot Springs. Rev. D. Spencer of Brantford, who is conducting the Baptist revival, is at the Allan. W. Godfrey, manager of the Bank of British North America, Vancouver, and Mrs. Godfrey, are in the city for a few days, the guests of Mr. and Mrs. W. T. Oliver. Percy Godenrath, the mining editor of the Spokesman-Review, is at the Windsor. He is here for the purpose of acting as resident correspondent of the Spokesman-Review. H. A. Jackson, general agent of the Great Northern railway, with headquarters at Spokane, accompanied by G. H. Williams, Kootenay freight agent of the Great Northern system, left yesterday for Nelson on a tour of the district. P. Rodier has been summoned by Constable Hoozon for refusing to pay the provincial poll tax. The hearing of the case will come up today before Police Magistrate Jordan.

## THE STOCK MARKET

It Is Rapidly Recovering Its Former Healthy Tone.

## THE FLURRY OF THE WEEK

It Was in Cariboo (Camp McKinney) Which Went From 70 Cents Up to \$1.12 1/2—Large Block of Monte Christos Sold.

The stock market was livelier during the past week than it was the previous week, and it promises to be still more active during the coming week. The stock market is made up of furies and lulls, and just because the latter occur with accustomed regularity is no reason why some should think the market is gone forever, as was predicted by a few during the recent collapse. Some of the leading stocks dropped off a few points while others advanced a good many points, and it looks as though the beginning of a rise all along the line had been made.

The feature of the week was the flurry in Cariboo (Camp McKinney), which rose from 70 cents to \$1.12 1/2 since Friday last. The company was formerly an American company, with headquarters at Spokane. It has changed into a Canadian corporation with the principal office at Toronto, and the company is a strong and energetic one. It is its intention to increase the output and to push work generally so that larger dividends than heretofore may be paid. This accounts for the increase in the price of the shares. The largest block of these shares that changed hands locally was 8,000 shares, which on Tuesday sold for 95 cents.

Monte Christos fell from 15 cents to 12 1/2, and rallied to 13 during the week. One block of 15,000 shares was disposed of and the movement was very large in these shares. This was especially the case when they were down to 12 1/2 cents. Dear Parks held their own pretty well during the week, but declined a few points. They fell from 21 to 19 and rallied and are now quotable at 19 from 20 cents. There is certain to be a sharp uprise in these shares as soon as the drift now being run on the 300-foot level encounters the pay streak that was disclosed on the 200-foot level. The efforts of the syndicate that is buying in this stock to depress it so far has not been very successful. Recent developments in the bottom of the shaft justify the belief that this time next week it will be shown that the drift will not have to be run as far as expected in order to reach the ore body.

Grand Prizes are the freest sellers of the cheap stocks. One block of 25,000 shares and several smaller parcels were sold early in the week. The price of Grand Prizes ranges from 4 to 5 cents. Iron Colts are good sellers at from 9 to 10 cents. Iron Horses sold freely during the week at 18 cents. The Iron Horse company is erecting its ore house and grinding the site for its compressor plant. The double compartment shaft has reached a depth of 46 feet. The fact that work is progressing with such earnestness has caused quite a local demand for the shares.

There has been an enlarged local demand for the White Bears and they sold at from 7 to 7 1/2 cents. The outlook in the White Bear was never more promising and if the expectations of those most interested in the property are realized it will not be long before these shares will be selling for a much higher price than at present. Novelties are holding their own and the property of the company is reported to be looking well. These shares are selling for 4 1/2 cents. There is considerable life in Commanders, and they sell at 13 cents. Giants are selling at from 6 1/2 to 7 cents.

There is a home demand springing up for Sarah Lee, one of the Ymir group. Work has been resumed on this property and it evidently has a promising future. Fairmonts are going off rapidly at 6 cents. One block of 15,000 shares was sold during the week. Monarchs are in good demand at 7 cents, which is due to the good reports that continue to come from this property. Salmo Cons. continue to be in demand and are quoted at 15 cents. The price is shortly to be raised to 20 cents, and the encouraging condition of the properties of the company justify this advance.

Republic stocks have been in excellent demand during the past week. This was especially the case with Jim Blaines, San Polis and Princess Mauds. The latter shares advanced from 3 1/2 to 8 cents and Jim Blaines from 32 to 40 cents.

## LOCAL BREVITIES.

Born—Last night, to Mr. and Mrs. J. I. Stowe, a daughter. Homer Hutchinson, a miner, and Miss Jane Trethewey were married last evening by Rev. George H. Morden at the home of Richard Green on Nickel Plate flat. The special services being conducted in the Baptist church by the Rev. Dr. Spencer of Brantford, Ont., give signs of being a great success, as an appreciative audience greeted the doctor last night. Services every night, except Saturday, for one week. Everybody is made welcome. D. D. Birks and others have been annoyed by a fly appearing in a local publication, and thinking that F. J. Perine of Stunden & Perine, was the publisher, have blamed him. Mr. Perine wishes it understood that he is engaged in the job printing business and that he does not issue a paper. The paper in question is issued in another part of the city.

B. C. Market. The past week has been a better feeling established, the public whist two or three unduly depressed, at general aspect is most work that ever going into the Bullion extraction at Silica is now commencing crushing at the enormous bodies of the first test, in all made on War Eagle armed assays and evident that it will be most plant at present has a day, which at any be increased to 100. 47 cents are well worth the property is situated and the group containing is being con- Monarch claim, and down 44 feet and will be 100-foot level, where to crosscut. Three examined the property, that we can recommend Fairmonts at 6 are a shaft is now down 50 at assay gave \$8 in gold, continued throughout the
