of the boys took the Arch degree. Ice cream and cake was served by the ladies at 12 o'clock

Rob Carvell is backing it for a few days. Mrs. Carvell is visiting her sister in Hartland.

The 50th Anniversary of the dedication of the U. B. church took place on Sunday the 18th. In spite of the condition of the roads and the inclemency of the weather a fair sized congregation was present at each of the

services. The church was prettily decorated with potted plants and cut flowers. The choir and congregation rendered good music. But best of all were the fine sermons. In the morning our pastor, Rev. H. R. Bell, gave one of his best messages from the words "Where there is no vision the people perish." He read a brief his tory of the building of the church, the names of some who were instrumental in its completion and the dedication on June 10, 1872, by Rev. Geo. W. Mc Donald. Rev. Mr. Ackland was the preacher in the afternoon. His scholarly address was listened, to with great attention. The subject was 'How Christians ought to behave" and I feel sure that all who heard were helped. At 7.30 Rev. Mr. Williamson was on hand with the condi-tion of discipleship with the words "If any man will be my disciple, let him deny himself, take up his cross and follow me." All went home feeling that it was good to he there, the only regrets being that so many missed a rare treat.

towards the construction of every perfectly adapted shape, of e ery in-dividual optimum. All existing sub-stances must be based on these seven fundamental shapes, as nature has not produced any others; let the human mind create what it will, it can only achieve variations of these seven forms; it cannot get berond them

NATURE'S MODELS-

"We take a bluebell, and on anaysing it we see that leaves and petals are planes; the roundness of the sphere, the shape of the cone, are joined with planes in its corrolla, screw-lines and spiral planes are re-peated in ornamental coils; the stalk is a staff. Again we find the seren fundamental forms, very much modi-fied and complicated, it is true, but still they remain as the seven con-structive parts of the world.

"We try to refute the above definition, but are baffled on every side. As a last resource, we consider a master-piece of human intelligence, a mod-

ern steam engine. Here are w screws, bolts, rivets, pins, axle shafts axle bearings, couplings, cog wheels, chains, pistons, piston rods, piston rod heads, piston rod collars, cranks, contrivance by our seven fundamen-tal shapes, and each one resolves it-self into either plane, staff, acrow,

crystal form, cone, or spherical surface. "Mechanical science is not ac quainted with a single model which Quanted with a single model which cannot be traced back to anture. Here is a law so great that it re-duces engineering; industry and architecture, art and science, even minerals, stones, mountains, and celestial bodies—in short, all exist-ing substances—to one uniform defi-nition. The same mechanical law nition. The same mechanical law governs identically all forms of life. The laws of least resistance and of the minimum of effort require that the same activities lead always to the same forms; and that all evolution must proce ed within the of the seven funds
