The Potassic and Phosphatic Fertilizers should be applied as soon as the land is workable.

Many disappointments with fertilizers are due to the fact that they have been applied too late for the crop to get full benefit from them in the first season. Remember that fertilizers are not used up in the first season, but are effective for several seasons. Nitrate of Soda should generally be applied as a top-dressing at planting time. Slower acting Nitrogenous fertilizers can be applied earlier with the other materials.

Muriate of Potash and Sulphate of Potash

can be obtained from the leading fertilizer dealers and seedsmen.
