CANADIAN NATURALIST

AND

Quarterly Journal of Science.

THE RELATIONS OF THE NATURAL SCIENCES.

BY T. STERRY HUNT, LL.D., (Cantab.) F.R.S.

(The President's address before the Mathematical, Physical and Chemical Section of the Royal Society of Canada, at the first meeting of the Society, Ottawa, May 27, 1882.)

The occasion which brings us together is one which should mark a new departure in the intellectual history of Canada. Science and letters find but few votaries in a country like this, where the best energies of its thinkers are necessarily directed to devising the best means of subduing the wilderness, opening the ways of communication, improving agriculture, building up industries, and establishing upon a proper basis schools in which the youth of the country may be instructed in those arts and professions which are among the first needs of civilized society. The teachers under such conditions can do little more than interpret to their pupils so much of the wisdom of the past, and of contemporary science, as may suffice for the immediate wants of the country, and will have but scanty leisure for original investigation in the field of knowledge. There are however never wanting earnest and curious minds who feel an almost irresistible impulse to labor in this field, to enlarge the bounds of thought, and to grapple with the great problems of man and nature. To foster this spirit, to encourage its beginnings, and to extend the influence of its example, should be the aim of wise statesmen and legislators who seek to elevate their kind and ennoble their nation: knowing that the brightest glories and the most enduring honors of a country are those which come from its thinkers and its scholars.
