DIAMOND SPECTACLES

These Speciacles are manufactured from "MI-NUTE CRYSTAL PEHBLES" melted togeth-er; high are called, DIAMGRD; on account of their hardness and brilliancy. It is well known that speciacles cut from Brazilian or Scotch pebbles are very laturious to the eye, be-cause of their-politisting light. Maying been dested with the polariscope the dia-mond lenses have been found to admit filteen per cent. less hested rives than any other polyble. They are ground with great scientific accuracy, are free from chromatic aterrations, and produce a brightness and distinctness of vision not, before at-tained in specialies.
