

Canada as a natural resource is best seen from the Earth Resources Technology Satellite (ERTS). This view was taken last July. The water line, right center, which looks like a profile of Punch, touches Vancouver. A more conventional Vancouver profile is below. Last month Canada sent the world's first domestic communications satellite — Anik I — to join other Canadian hardware in the sky, including Alouette I, the longest operating satellite, which has been collecting data for ten years.

This newsletter is published monthly except July and August. The views expressed are not necessarily those of the Canadian Government.
