policy was the best policy that could be promulgated for Canada, they say that we have adopted it, yet they find fault with what this government has done, and criticise us severely. If their contention is correct, if the present government is carrying out the best policy for Canada, why should these hon, gentlemen find fault? If the prosperity that Canada is enjoying at the present time is due to the old national policy as claimed by hon. gentlemen opposite, why did it not bring prosperity to Canada under the reign of hon. gentlemen while they held the reigns of power? If it is the Conservative policy, then the government in power is to be congratulated for carrying it into effect, because hon. gentlemen failed to enforce it in such a way as to bring prosperity to Caanda.

When the Fielding tariff was introduced in 1897, hon, gentlemen declared in this House that the Liberal policy would mean ruin and wreck to the manufacturing industries of Canada. It was not the policy of hon, gentlemen opposite then, but it was found to work successfully, when it infused new life into the business enterprise of Canada, stimulated agricultural interests, turned a time of depression into a time of prosperity and has been a success in every Now hon, gentlemen opposite lay claim to this policy and ask it to be christened a child of the old father, of the national policy. In comparing the tariff of the present government, or the Fielding tariff, with the Foster tariff, you will find that great reductions were made, and thereby millions of dollars were saved to the taxpayers of Canada. Figures are very dry and uninteresting to listen to, but in order to show some of the savings to the people of Canada between the present tariff and the tariff of hon. gentlemen opposite for last year, I will be compelled to use a few figures as follows:

Comparative reductions between the tariff of the late government and the tariff of the present government.

Present

Old
