

education. In many respects it is playing a greater part than any other organization and it is pursuing various lines of work with which we should be closely allied. The experimental farms in all the provinces are in themselves an important factor in the agricultural education of the country and are contributing materially even to College work.

With regard to the activities of the College departments, some of these have been discussed with Dr. Harrison but he has not kept in close touch with them nor has he in general been identified with the major features of them. Consequently, as Dean of the School of Agriculture, he is not in a position to present the work of departments even in their larger aspects to farmers, visitors, or to the University authorities.

We take exception to Dr. Harrison's statement that his suggestions have been disregarded and to the implication that the departments have been unwilling to co-operate with him. He has made very few suggestions of the nature indicated. The reporting of student absences has in some cases been neglected but it was pointed out to Dr. Harrison at a faculty meeting that if more simple and definite provision for such reports were made the difficulty would be overcome.

There has never been any general understanding as to the desirability of publishing bulletins. The impression has prevailed that funds were not available for such purpose. In the list of publications mentioned, one entitled "Sheep Raising for Profit in Quebec", is not included. It was
