These pills are not a purgative, but a tonic blood and nerve builder. they not only cure the usual forms of

rheumatism but chronic and acute rheumatism as well as

sciatica. In a word they cure all diseases caused by poor

Thos. Hackett, well-known to nearly all the marine men entering the port of Kingston, says:—"As a result of exposure while sailing on the lakes I contracted a very severe attack of rheumatism. The pains were especially severe in the arms and shoulders, rendering me almost unfit for work. Many a night I could not sleep, so great was the pain, and as a result the rest of my system became badly run down. I tried almost everything that fitends suggested, and felt thankful even when I only got temporary relief. One day a friend suggested Dr. Williams' Pink Pills. I had not been taking the pills long when I found that I had at last got a medicine that could conquer rheumatism. Gradually the pains and stiffness left me. I got good sound sleep, and in the course of a month or so I was entirely free from the malady that had made my life so miserable. After my many experiments with other medicines I am safe in saying that Dr. Williams' Pink Pills have no equal as a cure for rheumatism, and sufferers should take them at the first indication of the trouble."

THE SEMI-WEEKLY TELEGRAPH, ST. JOHN, N. B., FEBRUARY 1, 1962. ANNUAL CONVENTION

Crop Statistics Presented by Hon. L. P. Farris-Addresses by Many Eminent Men on Pertinent Topics-Association May Meet in St. John Hereafter.

Dairymen's Association opened in the Y.

M. C. A. hall here this afternoon with about a hundred delegates in attendanceresident B. R. Violette, of St. Leonards, welcomed the delegates in a brief address.

FARMERS AND DAIRYMEN

Fredericton, N. B., Jan. 28.—(Special). | following resolution which was seconded —The annual meeting of the Farmers' and | by F. E. Sharp, Midland:

welcomed the delegates in a brief address.

He regretted that the meetings were no tonger held during the session of the legislature and thought the change had partially deprived the association of the active interest of public men, as they did not have an opportunity to become members and attend meetings that they formerly had. He also regretted that the government had not displayed more wisdom in distributing bonuses to butter factories and contended that some districts, particularly in Madawaska, had more than they could support.

Governor McClelan, who was most heartily received by the convention, made a most pleasing address, during the course of which he strongly urged farmers to give more attention to fruit growing.

He was followed by Hop. L. P. Farris, who spoke of the institute work done during the year and gave the following statististics on crops:

Bushels

Expedient.

This resolution brought out considerable discussion but, was finally adopted.

Prof. J. H. Grisdale, of Ottawa, was the first regular speaker. He spoke on soil fertility. The first principle he laid down was that to obtain good results we must have our crops feel perfectly at home in the soil in which they are planted. It is necessary to have in our soils plenty of decaying vegetable matter called humus. In our sandy soils humus makes the soil firm and assists in holding moisture. In clay soils it has a tendency to lighten the soil, which is very necessary. This sand we always find it on the surface. Experiments show that crops do best where the humus is kept to the surface. Experiments show that crops do best where the humus is kept to the surface. He hought a good many farmers made a great mistake in turning their sod, which is their chief source of humus, too deep. The young plants want it to feed upon.

This resolution brought and spoke of the surface is course.

This resolution brought the first regular speaker. He spoke on soil fertility. The first principle he laid down was that to obtain good results on a farm it must be throu This resolution brought out con

The discussion which followed was very profitable.

The discussion which followed was very profitable.

Simpson Rennie, of Toronto, spoke upon relation of crops and their cultivation. His rotation is an eight years one and begins with oats on sod the first year; second year peas, third year wheat, fourth year hoe crop, fifth year barley and seed down, sixth year clover, seventh year nectange of 100.000 lbs.

During the year, he said, 85 institute meetings had been held with a total attendance of five thousand. There had also been seventy meetings by dairy superintendents, making a total of 167 with attendance of ten thousand.

W. W. Hubbard introduced the subject of agricultural credit and was followed by Dr. Davidson, of the university, who delivered an exhaustive and carefully thought out address on the subject. He downline was made in rows 30 inches apart, each set placed 15 weed seeds down in his corn or root crops in the early stages of their growth. He would leave the roots from 18 to 24 inches apart. Potatoes should be planted in rows 30 inches apart, each set placed 15 inches apart. The seed should be cut from large potatoes with one or two eyes in a set. He seeds down with six pounds common red clover and six pounds Timothy. On this point Prof. Grisdale differed from him. He would recommend six pounds common red, two pounds Alsike and 12 pounds Timothy. Mr. Rennie thought this quantity only a waste.

A lively discussion was carried on all through his remarks.

Mr. Rennie did not finish his address at the morning session and had to continue

service of the servic

There are a number of other so-called tonic pills, but they are all imitations of this great medicine. Be sure that you get what you call for by noting that the name "Dr. Williams' Pink Pills for Pale People" appears in full on every box. If you do not find them readily at your dealers, send direct to she Dr. Williams' Medicine Co., Brockville, Ont., and they will be mailed post paid at 50 cents a box or six boxes for \$2.50.

fall below 50 degrees during the winter, and better 60 degrees, and the need for plenty of light and for whitewashing the inside of the stable at least once a year was emphasised. The food should be succilent, palatable, digestible and properly balanced in order to supply the body wants of the animal. The following was given as a sample of a balanced ration:

Thirty-five pounds corn silage, 10 pounds mixed hay (clover and timothy); 20 pounds mangels, four pounds bran, two pounds mangels, four pounds chopped oats.

At the close of Mr. Mitchell's address, C. L. Smith, of Woodstock, moved, and F. E. Sharp, of Midland, seconded the following resolution:

Whereas the governments of the United State of the plant of the providing they had the weight. Keep the following regard to recent years.

The same mangels are needing Dr. Twitchell and others from the neighboring republic. He thought that steers at first fed cheaply and did others from the neighboring republic. He thought that steers at first fed cheaply and did others from the neighboring republic. He thought that steers at first fed cheaply and the two countries were on good terms there were sure signs, of peace and good will. He spoke of the benefit to be had from agricultural societies, exhibitions and farmers' institutions. Coming to the question of dairying, while there was great advancement in this business in Canada, was New Brunswick doing her share? The same might be said with the bacon and poultry industry. Farmers should think and plan and prepare for their crops one year shead. He believed farmers of the thought for the two darks are the covernments of the United thought and the states at first fed cheaply and that steers at first fed cheaply and the two countries were on good terms there were and good will. He spoke of the steers at first fed cheaply and that steers at first fed cheaply and the two countries were on good terms there were sure signs, of peace and good will. He spoke well fed from the transition turn out as profitable in the lot two ou

New Brunswick. If we are to keep pace with the time we must reach out, study and investigate the details of our business. Dr. Inch made a few remarks on education in New Brunswick, and closed by paying a high compliment to Prof. Robertson and the work in which he is engaged. Fredericton, Jan. 30—(Special)—The farmers' meetings are over, three sessions today c'osing the convention. The interest was most satisfactory, and many admirable addresses were given; but perhaps the most good was done in the discussions which followed the introduction of the various subjects. Some of the speakers were sharply cross-questioned, but each showed his mastery of his subject.

The chair was again occupied by Presibne and investigate the details of our business. His ration consisted of 12 pounds of clover hay, 30 to 35 pounds roots and 10 pounds mixed was prain on them. A lively discussion followed, but had to be cut on account of time.

Dr. Twitchell followed. He gave an admirable addresses on the horse wanted for the market.

At the close of Dr. Twitchell's admirable address, a hearty vote of thanks was readered him.

The audit committee made a report, which was adopted.

The chair was again occupied by Presi-

as those well fed from the start. As to feeds, he would recommend that steers coming off the grass, roots and ensilage, along with roughage and a small quantity of grain. To finish steers, increase grain up to 8 to 8½ pounds daily along with a quantity of oil meal in the start and again at the finish.

Simpson Rennie spoke on the same subject. He found feeding for beef more profitable than feeding for dairying. As to age, he said the younger the better, providing they had the weight. Keep the steers from getting lousy by clipping off the hair along the back and apply oil to assessor, and the providing they had the weight. Keep the steers from getting lousy by clipping off the grass. His ration of the providing they had the weight. Keep the steers from getting lousy by clipping off the grass there are the providing they had the weight. Keep the steers from getting lousy by clipping off the grass. His ration of the providing they had the weight. Keep the steers from getting lousy by clipping off the grass and the providing they had the weight. mirable addresses were given; but perhaps the most good was done in the discussions which followed the introduction of the various subjects. Some of the speakers were sharply cross-questioned, but each showed his mastery of his subject.

This morning's session was opened with the president in the chair. The nominating committee shoulted the following report, which was adopted:

Provincial riee-president, George Frisher, Northumberland.

Recording secretary, Henry Wilmot.

Corresponding secretary, W. W. Hubbard.

Treasurer, Bliss M. Fawcett.

County vice-presidents—St. John, B. V. Milladge; Kings, H. H. McIntyre, Queens. Thos. Hetherington; Sunbury, Herbert H. Smith; York, Daniel McMillan; Carleton, C. L. Smith; Victoria, A. P. Hanson; Madawaska, Donald Daigle; Northumberial Massaka, Donald Daigle; Northumberial Massaka

President Violette, before leaving the chair, expressed his hearty thanks to the members of the association for their kindness to him during his term.

President Taylor, on taking the chair, thanked the association for the honor conterred upon him. He asked the members to assist him in every way possible in advancing the interests of the association.

The first speaker was Geo. H. Clark, department of agriculture. Ottawa, who spoke at some length upon Seed Selection, and Commercial Seeds.

Mr. Rennie explained the harvesting and tureshing of clover. He preferred
