PAINE'S CELERY COMPOUND

Is the Medicine That has Made Thousands of Country Toilers Well and strong.

There are thousands of farmers in our land who are in rich broad acres and gold,and yet lack that true wealth known as good health.

It is a melancholy fact that men and women in the country districts, breathing the purest air, and drinking from God's bubbling fountains and limpid springs, are liable to the same diseases and ailments that come thick and fast to city people. We find rheumatism, neuralgia, debility, dyspepsia, kidney and liver troubles and blood diseases almost as common in the farmer's family as they are in city homes.

Paines' Celery Compound, Heaven's best blessing to the farming community has done more for the banishment of dread disease and the building up of health than all other combined medicines. Mr. G. J. Smye, a well known farmer, of Scheffield, Ont., says:

"It is with great pleasure that I testify to the value of your great medicine, Paines' Celery Compound. For nearly two years I suffered from indigestion, kidney and liver trouble. After trying several medicines that did not effect a cure, I decided to try your Compound. Before using it I was so low in health I could not eat or sleep. I could not lie in bed owing to pains in my back; it was only by resting on elbows and knees I was enabled to obtain a slight degree of ease. Before I had fully taken one bottle of your medicine I began to improve. I have now taken in all fourteen bottles with grand results. I am a farmer and am now working every day. Anyone may refer to me in regard to these statements, or to any of my neighbors around Scheffield, where I am well known. I am a living witness to the worth of Paines' Celery Com-

Englishman-"Can you tell me my lad how far it is to Kirkcaddy?" Scots boy-"Well, if ye gang on straight, it's about twenty-five thousand miles; but if ye turn back, ye're there in five min-

OPINIONS OF LEADING PHYSICIANS. Two Women Go Down at Port Hope from a Row Boat.

Annie Hadden and Annie Trawin Sink to Death While Near the Dock-Heroic Rescue by John Fox-Jumped Into the Lake and Saved Berths Hadden and Flora Embleton-Other Deaths and Port Hope, Sept. 16.-One of the

Port Hope, Sept. 16.—One of the saddest drowning accidents this town have ever witnessed occurred last evening at 7, when two young women lost their lives. They were Annie Hadden, dressmaker, aged 25, daughter of Capt. Hadden, and Annie Trawin, apprentice, aged 18, daughter of H. Trawin, both of this town. The deceased, with Bertha Hadden and Flora Embleten, had been out for a row in a small skiff and had returned to the edge of the east side of the dock. In endeavoreast side of the dock. In endeavor-ing to land, the boat was capsized, and the four girls, unable to swim, were thrown into the lake. John Fox was on the dock. He jumped to the rescue of the girls, and succeeded in saving two of them. The others sank. Their bodies were shortly af-terwards recovered, but in spite of all efforts life could not be revived. John Fox is the hero of the town, for he certainly rescued the two for he certainly rescued the two girls at the peril of his own life. He will be recommended for the Royal Hu-mane Association medal.

Drowned at Sarnia.

to Miss Pheebe Grant Stephens of
Saginaw.

Montreal, Sept. 16.—Annie Moore of Springfield, Mass., was found dead in her room yesterday, at the Queen's Hotel, having committed suicide by taking morphine. She is well connected in Springfield, and had \$1.77 in her rooms in the connected of had \$177 in her possession when she

Killed in a Cave-in.

Moncton, N. B., Sept. 16.—Charles Pendall and Frank Steeves, employed by the Aldert Manufacturing Com-pany, at their plaster quarry at Hillsboro, lost their lives in a cavein at the quarry this afternoon. Pendall, who came here recently from England, was crushed to death, and Steeves lived but a short time.

Roanoke, Vt., Sept. 16.—A special from North Fork, W. Va., to The Roanoke Times, says: A disastrous gas and powder explosion occurred in the Big Four mine of the Algoma Coal & Coke Company here yesterday morning. James Lester, an engineer, John Roockie, a Hungarian mimer, and 15 colored miners are known to be in the mine now, and there is no chance of their being recovered alive, as they are beyond the Seventeen Miners Killed. covered alive, as they are beyond the point where the explosion occurred, and the gas and smoke is so thick that the rescuing parties are being

driven back.

Spain Expels Deroulede. San Sebastian, Sept. 16.—M. Paul Deroulede has left here by express injunctions of the authorities, the Spanish Government wishing to show some return for the attention shown the Queen-mother in Paris.

Montreal's Death Rate.

Montreal, Sept. 16. — The city's death rate from Dec. 31 to Sept. 1

A Scientific View of the Value of On windy days, when dust fills th

air and penetrates through screens and even around closed windows, one feels tempted to anathematize it without let or hindrance. When one thinks of what the lungs inhale every minute, one wants to stop breathing. But that would simply add to the world's huge collection another little dust heap to be blown about by the winds.

about by the winds.

Hence it is much better to leave off anathema and begin at the other end and seek the usefulness of dust. A scientist tells us that if there were scientist tells us that if there were absolutely no dust in the air the path of a surbeam would be totally black. Near the surface of the earth the atmosphere is full of coarse particles which reflect all the rays and hence produce no one color. At Martinique, for instance, the air was so crammed with them after the first eruption that the sun rose perfectly white.

After the still greater Krakatoa explosion the dust was disseminated so thickly and so far that the sunsets all round the world glowed strangely for mearly three years. This came chiefly from the volcanic glass that was ground to impalpable powder and thrown up many miles, where it was caught by the currents of air that as the earth turned caused it to be completely encircled by this powdery substance. Even the ordinary sunset, however, is produced by the sun shining through different densities of vapor and dust, the particles being arranged and rearranged by air currents that while the sun sinks make the display change with every moment, and we owe this glory of form and color mainly to dust.

Where there is little dust the air is blue, and thus we get the pure tint of "sky blue." As the dust decreases the depth of blue increases, so that from mountain tops or in the central Pacific, a deeper blue is seen, and balloon ascensions have actually been mide on thick the districtions. was caught by the currents of air that as the earth turned caused it to be completely encircled by this

and balloon ascensions have actually been made so high that the heavens appeared almost black, the veil of our atmosphere being attenuated to such a degree one could get an idea of the absolute dark.

The breeder must depend for the improvement of his cattle and cows upon inheritance and the system of feeding, but many beginners who do not see immediate results of a system of careful breeding, get discouraged and give up. A great many criticisms, of breeding results aged and give up. A great many criticisms of breeding results are thus voiced through disappointment. A good many times calves inherit tendencies rather than the actual gifts which their sires possessed, and these tendencies these tendencies require cultivation these tendencies require cultivation and encouragement to develop. Good breeding consists in recognizing such valuable tendencies and in catering to them. But time is required in some instances to make them at all consistent with one's ideas of what they should be. In the hands of good feeders and breeders dairy cows are producing larger supplies of milk and cream. Milk rich in butter fats is becoming more common, and feed. and cream. Milk rich in butter fats is becoming more common, and feeding more economical. A cow can be fed to-day by a progressive dairyman at much less cost than it was possible ten years ago, and yet feed is higher. This is due to a better balanced ration, which means economy in cost on both ends. It produces more results, and it can be provided at less expense.

ess expense.

he have the breeds to-day which the base or butter with a tess expense.

We have the breeds to day wines, are well adapted to beef or butter making, and these are becoming more common on our farms every year. Their general distribution argues well for the future of our argues and dairy outlook. But to these good argues well for the future of our cattle and dairy outlook. But to keep up the potency of these good breeds we must have the courage of our convictions, and the patience necessary to wait for results. We need to feed for a purpose, and to develop tendencies which will provide us with the course in the tendencies which will provide us with sure profits. Well-bred cows in the hands of ignorant people are sure to degenerate, and in time all their good points will be neutralized. It is necessary that we should have intelligence in feeding to bring out the best that there is in them. Educated men in this line of work will not only emphasize the value of the good breeds, but they will raise the standard of dairying and beef raising a little higher each year.—Journal of Agriculture. Agriculture.

One time it was a common practice for farmers to burn over their fields for the purpose of getting rid of dry weeds or other vegetable growths before plowing, says W. F. McSparran. What a sinful thing to do! They not only, and some of them do it yet, destroy the very ma-terial they should plow down to make humus, but actually destroy or drive off into the atmosphere that alread made and coming within the action of the fire. They say they destroyweed seeds and don't know that weed seeds and don't know that many seeds grow better for having been well heated, and if they expect to rid their land of weed seeds and insects by burning over it they will find in the days of their financial extremity that they have done the un pardonable agricultural sin.

Javal's Theory of a Sixth Ser

Dr. Javal of the French Academ of Medicine, who is sightless, denie that nature compensates blindness by increased sensibility of touch and hearing, but contends that when a person is blind an extra development takes place in the sixth sense which which has been called the sense of obstacles, acts by the perception of certain warm and indefinite vibrations. The seat of the sense is believed to be placed in the forehead.

Phillips Business College · -AND-

SHORTHAND INSTITUTE

AYLMER, ONT. Are you thinking of taking a Comnercial or Shorthand and Typewriting course during the coming fall or winter? Phillips' Business College has a splendid suite of rooms on second flat over-Mann's store, absolutely safe from fire, well heated and properly arranged with

egard to light, etc Instructions will be given in Book keeping, Shorthand, Typewriting, Pennanship, Arithmetic, Correspondence, Commercial Law, Spelling, etc. Tests are taken on Shorthand and Typewriting speed weekly, instead of monthly as s the case in many colleges.

Write for terms, etc. Catalogue is in ourse of preparation. Fall term opens September 2nd.

W. A. PHILLIPS, Principal.
