The "Plansifter" in a 30-Bbl. Mill.

The "Plansifter" in a 30-Bbl. Mill.

Holm, February 28, 1897,

Messes. Wm. & J. G. Gerey, Toronto, Ont.

Gentlement-As I have now quite a little opportunity for observing the work of the "Plansifter" which you supplied to me, it being now nearly three months since It was started, I have pleasure in saying that it is overything that you represented it to be, and it comes fully up to my expectations. I find that the machine is very light on power, that is, compared to other Roller Mills using Reel systems, which I have seen before deciding to adopt the "Plansifter." The machine is easily controlled and regulated in its operation, produces very satisfactory results in regard to the quality of flour made and the cleanness of the separations of the different stocks. The machine does not cause any vibration or oscillation to the building that is appreciable. So far as I have been able to observe, I believe it is the best botting system, more especially for small mills. I am only using in connection with it one Centrifugal and one Bran Duster.

In conclusion, I am thoroughly satisfied with the machine and its operations in all respects, and have no cause to regret laving adopted it when remodelling my mill. Yours sincerery, Itour. Sudden.

Three No. 2 Plansifters and 2 No. 5 Little Wonders did all the bolting.

Little Wonders did all the bolting.

PRTERIORO, February 20, 1897.

MESSES, WM. & J. G. GREKY, Toronto, Ont.

GENTLEMEN:—In reply to your enquiry as to how we liked the work of "Plansifters," would say that after 1 unning three of them between one and two months continuously, we are very much pleased with their work.

They run with little power, make perfect separations, and give no trouble whatever in their operations.

The different separations can be seen very readily, and a miller is not at any loss to tell just what the machines are doing, while the separations are under perfect control.

Wo had no difficulty whatever in making 250 bbls, per-24 hours, the flour being A 1, and our yield running below 4 bushels, 15 pounds.

hours, the flour being A I, and our yield running below I bushels, Is pounds.

The sleves can be readily changed and repaired if necessary. They run very steadily, causing no undur vibration in the building, and were we now purchasing new scalping and belting machinery, the "Plansifer "would be again overchoice.

Yours very truly,

The Consolidation Milling Co.

P. M. Clark, Manager.

The three Plansifters in the above mill were placed side by side in the lifth (top) storey of a not overly strong frame building. The log storey was formed with a mansard roof built in the usual light timbers run along under the roof. When standing on the floor beside the Plansifters when in motion, at full capacity, one could not detect any ribration to the building. It was considered a severe test and proved conclusively how steadily the Plansifters run, and how accurately and easily they are kept in perfect balance.

It Saves Space It Saves Power It Saves Cloth Makes Better Separations Makss Purer Stock Makes Better Flour | No Noise
