Marketing Profile

Husky Injection Moulding Systems (Husky) is a majority employee-owned Canadian company which specializes in the manufacture of injection moulding systems for the plastic industry. Through its global sales and manufacturing operations, Husky has grown to be an international industry leader since its beginnings in 1953. In addition to the machine and mould manufacturing facilities located at the headquarters in Bolton, Canada, Husky has machine manufacturing facilities in Fremont, Ohio and Luxembourg and mould manufacturing facilities in Boston, Massachusetts and Germany.

Injection moulding machines from 120 to 3,650 tons (135 to 4,000 U.S. tons) are available for general purpose and specialized applications, including multi-material and co-injection. The modular machine design provides customers the flexibility to choose only the features required to suit their particular application with no compromise in quality. Complementary to Husky's machines are a full range of robotic systems designed to increase system efficiency and product quality.

Over the past ten years, Husky's sales have increased at an average rate of 20% annually, and in its fiscal 1993 are expected to exceed CDN\$ 350 million. The company invests approximately 5% of annual sales in customer driven research and development.

Recognizing the increase in global competition and rapid changes in international markets, the company has concentrated on strengthening its international operations. Sales offices have been opened in Japan and Mexico to penetrate the high growth Asian and Latin America markets. Husky has 17 sales offices in North America and international offices in Australia, France, Germany, Italy, Japan, Korea, Luxembourg, Mexico, New Zealand, Spain and the United Kingdom.
